

INSTALLATION MANUAL

Your model may look different than the model illustrated in this manual.

THIS PRODUCT IS TO BE INSTALLED AND SERVICED BY A TRAINED GATE SYSTEMS TECHNICIAN ONLY.

Visit www.liftmaster.com to locate a professional installing dealer in your area. This model is for use on vehicular passage gates ONLY and not intended for use on pedestrian passage gates. This model is intended for use in Class I, II, III and IV vehicular swing gate applications.

SAFETY

When you see these Safety Symbols and Signal Words on the following pages, they will alert you to the possibility of serious injury or death if you do not comply with the warnings that accompany them. The hazard may come from something mechanical or from electric shock. Read the warnings carefully.

When you see this Signal Word on the following pages, it will alert you to the possibility of damage to your gate and/or the gate operator if you do not comply with the cautionary statements that accompany it. Read them carefully.

IMPORTANT NOTE

- BEFORE attempting to install, operate or maintain the operator, you must read and fully understand this manual and follow all safety instructions.
- DO NOT attempt repair or service of your gate operator unless you are an Authorized Service Technician.

CAUTION

SAFETY

UL325 MODEL CLASSIFICATIONS

UL325 MODEL CLASSIFICATIONS

CLASS I - RESIDENTIAL VEHICULAR GATE OPERATOR

A vehicular gate operator (or system) intended for use in a home of one-to four single family dwellings, or a garage or parking area associated therewith.

CLASS II – COMMERCIAL/GENERAL ACCESS VEHICULAR GATE OPERATOR

A vehicular gate operator (or system) intended for use in a commercial location or building such as a multi-family housing unit (five or more single family units) hotel, garage, retail store or other building servicing the general public.

CLASS III – INDUSTRIAL/LIMITED ACCESS VEHICULAR GATE OPERATOR

A vehicular gate operator (or system) intended for use in a industrial location or building such as a factory or loading dock area or other location not intended to service the general public.

CLASS IV- RESTRICTED ACCESS VEHICULAR GATE OPERATOR

A vehicular gate operator (or system) intended for use in a guarded industrial location or building such as an airport security area or other restricted access locations not servicing the general public, in which unauthorized access is prevented via supervision by security personnel.

UL325 ENTRAPMENT PROTECTION REQUIREMENTS

This chart illustrates the entrapment protection requirements for the UL325 classes.

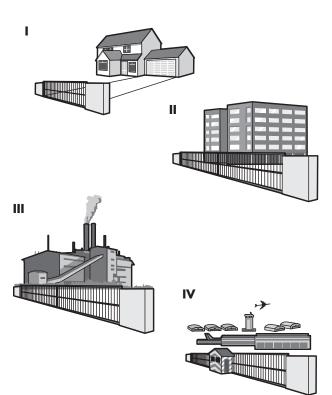

GATE OPERATOR ENTRAPMENT PROTECTION					
UL325 Classification	Swing Gate Operator				
	Primary Type	Secondary Type			
CLASS I-CLASS IV	Α	B1 or B2			

In order to complete a proper installation you must satisfy the entrapment protection chart shown. That means that the installation must have one primary means of entrapment protection and one independent secondary means of entrapment protection. Both primary and secondary entrapment protection methods must be designed, arranged or configured to protect against entrapments in both the open and close directions of gate travel.

For Example: For a gate system that is installed on a single-family residence (UL325 Class I) you must provide the following: As your primary type of entrapment protection you must provide

- Type A Inherent (built into the operator) entrapment sensing and at least one of the following as your secondary entrapment protection:
- Type B1 Non-contact sensors such as photoelectric sensors,
- Type B2 Contact sensors such as gate edges

NOTE: UL requires that all installations must have warning signs placed in plain view on both sides of the gate to warn pedestrians of the dangers of motorized gate systems.

SAFET

SAFETY INSTALLATION INFORMATION

- 1. Vehicular gate systems provide convenience and security. Gate systems are comprised of many component parts. The gate operator is only one component. Each gate system is specifically designed for an individual application.
- 2. Gate operating system designers, installers and users must take into account the possible hazards associated with each individual application. Improperly designed, installed or maintained systems can create risks for the user as well as the bystander. Gate systems design and installation must reduce public exposure to potential hazards.
- 3. A gate operator can create high levels of force in its function as a component part of a gate system. Therefore, safety features must be incorporated into every design. Specific safety features include:
 - Gate Edges
 - Guards for Exposed Rollers Photoelectric Sensors Screen Mesh
 - Vertical Posts
 - Instructional and Precautionary Signage
- 4. Install the gate operator only when:
 - a. The operator is appropriate for the construction and the usage class of the gate.
 - b. All openings of a horizontal slide gate are guarded or screened from the bottom of the gate to a minimum of 4 feet (1.2 m) above the ground to prevent a 2-1/4 inches (6 cm) diameter sphere from passing through the openings anywhere in the gate, and in that portion of the adjacent fence that the gate covers in the open position.

- c. All exposed pinch points are eliminated or guarded, and guarding is supplied for exposed rollers.
- 5. The operator is intended for installation only on gates used for vehicles. Pedestrians must be supplied with a separate access opening. The pedestrian access opening shall be designed to promote pedestrian usage. Locate the gate such that persons will not come in contact with the vehicular gate during the entire path of travel of the vehicular gate.

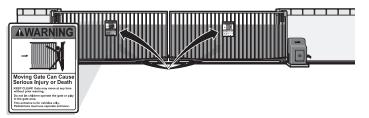

- 6. The gate must be installed in a location so that enough clearance is supplied between the gate and adjacent structures when opening and closing to reduce the risk of entrapment. Swinging gates shall not open into public access areas.
- 7. The gate must be properly installed and work freely in both directions prior to the installation of the gate operator.

8. Controls intended for user activation must be located at least 6 feet (1.8 m) away from any moving part of the gate and where the user is prevented from reaching over, under, around or through the gate to operate the controls. Outdoor or easily accessible controls shall have a security feature to prevent unauthorized use.

- 9. The Stop and/or Reset (if provided separately) must be located in the line-ofsight of the gate. Activation of the reset control shall not cause the operator to start.
- 10. A minimum of two (2) WARNING SIGNS shall be installed, one on each side of the aate where easily visible.

- 11. For a gate operator utilizing a non-contact sensor:
 - a. Reference owner's manual regarding placement of non-contact sensor for each type of application.
 - b. Care shall be exercised to reduce the risk of nuisance tripping, such as when a vehicle trips the sensor while the gate is still moving.
 - c. One or more non-contact sensors shall be located where the risk of entrapment or obstruction exists, such as the perimeter reachable by a moving aate or barrier.
- 12. For a gate operator utilizing a contact sensor such as an edge sensor:
 - a. One or more contact sensors shall be located where the risk of entrapment or obstruction exists, such as at the leading edge, trailing edge and post mounted both inside and outside of a vehicular horizontal slide gate.
 - b. One or more contact sensors shall be located at the bottom edge of a vehicular vertical lift gate.
 - c. A hard wired contact sensor shall be located and its wiring arranged so the communication between the sensor and the gate operator is not subject to mechanical damage.
 - d. A wireless contact sensor such as the one that transmits radio frequency (RF) signals to the gate operator for entrapment protection functions shall be located where the transmission of the signals are not obstructed or impeded by building structures, natural landscaping or similar obstruction. A wireless contact sensor shall function under the intended end-use conditions.
 - e. One or more contact sensors shall be located on the inside and outside leading edge of a swing gate. Additionally, if the bottom edge of a swing gate is greater than 6 inches (152 mm) above the ground at any point in its arc of travel, one or more contact sensors shall be located on the bottom edge.
 - f. One or more contact sensors shall be located at the bottom edge of a vertical barrier (arm).

SAFETY

GATE CONSTRUCTION INFORMATION

Vehicular gates should be installed in accordance with ASTM F2200: Standard Specification for Automated Vehicular Gate Construction. For a copy, contact ASTM directly at 610-832-9585 or www.astm.org.

1. GENERAL REQUIREMENTS

- 1.1 Gates shall be constructed in accordance with the provisions given for the appropriate gate type listed, refer to ASTM F2200 for additional gate types.
- 1.2 Gates shall be designed, constructed and installed to not fall over more than 45 degrees from the vertical plane, when a gate is detached from the supporting hardware.
- 1.3 Gates shall have smooth bottom edges, with vertical bottom edged protrusions not exceeding 0.50 inches (12.7 mm) when other than the exceptions listed in ASTM F2200.
- 1.4 The minimum height for barbed tape shall not be less than 8 feet (2.44 m) above grade and for barbed wire shall not be less than 6 feet (1.83 m) above grade.
- 1.5 An existing gate latch shall be disabled when a manually operated gate is retrofitted with a powered gate operator.
- 1.6 A gate latch shall not be installed on an automatically operated gate.
- 1.7 Protrusions shall not be permitted on any gate, refer to ASTM F2200 for Exceptions.
- 1.8 Gates shall be designed, constructed and installed such that their movement shall not be initiated by gravity when an automatic operator is disconnected.
- 1.9 A pedestrian gate shall not be incorporated into a vehicular gate panel or that portion of the adjacent fence that the gate covers in the open position.

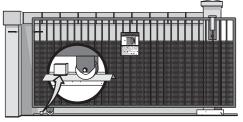

2. SPECIFIC APPLICATIONS

- 2.1 Any non-automated gate that is to be automated shall be upgraded to conform to the provisions of this specification.
- 2.2 This specification shall not apply to gates generally used for pedestrian access and to vehicular gates not to be automated.
- 2.3 Any existing automated gate, when the operator requires replacement, shall be upgraded to conform to the provisions of this specification in effect at that time.

3. VEHICULAR HORIZONTAL SLIDE GATES

- 3.1 The following provisions shall apply to Class I, Class II and Class III vehicular horizontal slide gates:
- 3.1.1 All weight bearing exposed rollers 8 feet (2.44 m), or less, above grade shall be guarded or covered.
- 3.1.2 All openings located between 48 inches (1.22 m) and 72 inches (1.83 m) above grade shall be designed, guarded or screened to prevent a 4 inch (102 mm) diameter sphere from passing through the openings anywhere in the gate, and in that portion of the adjacent fence that covers in the open position.

- 3.1.3 A gap, measured in the horizontal plane parallel to the roadway, between a fixed stationary object nearest the roadway, (such as a gate support post) and the gate frame when the gate is in either the fully open position or the fully closed position, shall not exceed 2 1/4 inches (57 mm), refer to ASTM F2200 for Exception.
- 3.1.4 Positive stops shall be required to limit travel to the designed fully open and fully closed positions. These stops shall be installed at either the top of the gate, or at the bottom of the gate where such stops shall horizontally or vertically project no more than is required to perform their intended function.
- 3.1.5 All gates shall be designed with sufficient lateral stability to assure that the gate will enter a receiver guide, refer to ASTM F2200 for panel types.
- 3.2 The following provisions shall apply to Class IV vehicular horizontal slide gates:
- 3.2.1 All weight bearing exposed rollers 8 feet (2.44 m), or less, above grade shall be guarded or covered.
- 3.2.2 Positive stops shall be required to limit travel to the designed fully open and fully closed positions. These stops shall be installed at either the top of the gate, or at the bottom of the gate where such stops shall horizontally or vertically project no more than is required to perform their intended function.

4. VEHICULAR HORIZONTAL SWING GATES

- 4.1 The following provisions shall apply to Class 1, Class II and Class III vehicular horizontal swing gates:
- 4.1.1 Gates shall be designed, constructed and installed so as not to create an entrapment area between the gate and the supporting structure or other fixed object when the gate moves toward the fully open position, subject to the provisions in the 4.1.1.1 and 4.1.1.2.
- 4.1.1.1 The width of an object (such as a wall, pillar or column) covered by a swing gate when in the open position shall not exceed 4 inches (102 mm), measured from the centerline of the pivot point of the gate, refer to ASTM F2200 for exception.
- 4.1.1.2 Except for the zone specified in Section 4.1.1.1, the distance between a fixed object such as a wall, pillar or column, and a swing gate when in the open position shall not be less than 16 inches (406 mm), refer to ASTM F2200 for exception.
- 4.2 Class IV vehicular horizontal swing gates shall be designed, constructed and installed in accordance with security related parameters specific to the application in question.

SAFETY ——

REQUIRED ENTRAPMENT PROTECTION DEVICES

REQUIRED ENTRAPMENT PROTECTION DEVICES

A WARNING

To prevent SERIOUS INJURY or DEATH from a moving gate:

- Entrapment protection devices MUST be installed to protect anyone who may come near a moving gate.
- Locate entrapment protection devices to protect in BOTH the open and close gate cycles.
- TH the open and close

RIGID objects, such as posts or walls.

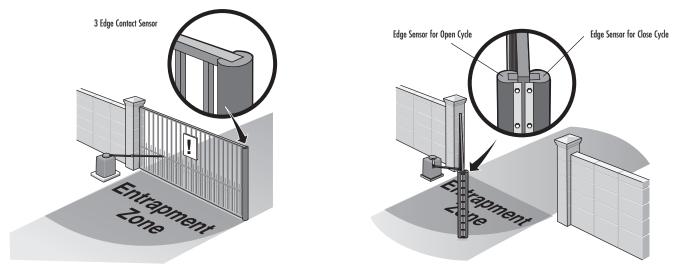

Locate entrapment protection devices to protect between moving gate and

An entrapment zone is every location or point of contact where a person can become entrapped between a moving gate and a stationary object. All gate operator systems REQUIRE two independent entrapment protection systems for each entrapment zone. This operator contains an inherent (internal) entrapment protection system (the primary entrapment protection system) and REQUIRES the addition of an external entrapment protection system (non-contact photoelectric sensor or contact safety edge sensor) for EACH entrapment zone.

Your application may contain one or many entrapment zones. Property owners are obligated to test entrapment protection devices monthly.

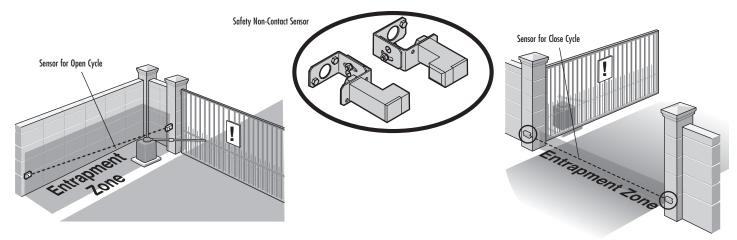

CONTACT SENSORS (EDGE SENSORS)

If the electrically activated edge sensor comes in contact with an obstruction while the gate is moving, the gate will stop and reverse. The gate will not be able to travel in that direction until the obstruction is cleared. Use edge sensor models G65MG0204, G65MG020, or G65MG0202.

NON-CONTACT SENSORS

If the photoelectric sensor beam gets blocked while the gate is moving, the gate will stop and reverse. The gate will not be able to travel in that direction until the obstruction is cleared. It is best to use monitored photoelectric sensors, model CPS-UN4. If a monitored photoelectric sensor is not working or loses power or the beam is blocked, then ALL gate operation in that direction will stop. Unmonitored photoelectric sensor models AOMRON and RETROAB are also acceptable.

SAFETY INFORMATION

INSTALLATION

To prevent SERIOUS INJURY or DEATH from a moving gate:

- Pinch points must be guarded at all times. Install enclosed-style gate tracks and roller guards.
- Place screen mesh 4 feet (1.2 m) high on the gate to prevent access through openings anywhere the gate may travel.
- Mount controls at least 6 feet (1.8 m) from the gate or ANY moving part of the gate.
- Install Warning signs on EACH side of gate in PLAIN VIEW. Permanently secure each Warning sign in a suitable manner using fastening holes.
- This operator is intended for vehicular use only. To prevent INJURY to
 pedestrians, a separate pedestrian access should be supplied, visible from the
 gate. Locate the pedestrian access where there is not a chance of INJURY at
 any point during full movement of the gate.
- Contact sensors MUST be located at the leading and trailing edges, and post mounted both inside and outside a horizontal swing gate. Non-contact sensors such as photo eyes MUST be mounted across the gate opening and operate during BOTH the open and close cycles.

- Entrapment protection devices MUST be installed to protect anyone who may come near a moving gate.
- Locate entrapment protection devices to protect in BOTH the open and close gate cycles.
- Locate entrapment protection devices to protect between moving gate and RIGID objects, such as posts or walls.
- Too much force on gate will interfere with proper operation of safety reversal system.
- NEVER increase force beyond minimum amount required to move gate.
- NEVER use force adjustments to compensate for a binding or sticking gate.
- If one control (force or travel limits) is adjusted, the other control may also need adjustment.
- After ANY adjustments are made, the safety reversal system MUST be tested. Gate MUST reverse on contact with a rigid object.
- DO NOT touch the heater when switch is on, heater may be hot.

CAUTION

- To AVOID damaging gas, power or other underground utility lines, contact underground utility locating companies BEFORE digging more than 18 inches (46 cm) deep.
- ALWAYS wear protective gloves and eye protection when changing the battery or working around the battery compartment.

WIRING

To reduce the risk of SEVERE INJURY or DEATH:

- ANY maintenance to the operator or in the area near the operator MUST NOT be performed until disconnecting the electrical power (AC or solar and battery) and locking-out the power via the operator power switch. Upon completion of maintenance the area MUST be cleared and secured, at that time the unit may be returned to service.
- Disconnect power at the fuse box BEFORE proceeding. Operator MUST be properly grounded and connected in accordance with national and local electrical codes. NOTE: The operator should be on a separate fused line of adequate capacity.
- ALL electrical connections MUST be made by a qualified individual.
- DO NOT install ANY wiring or attempt to run the operator without consulting the wiring diagram. We recommend that you install an edge sensor BEFORE proceeding with the control station installation.
- ALL power wiring should be on a dedicated circuit and well protected. The location of the power disconnect should be visible and clearly labeled.
- ALL power and control wiring MUST be run in separate conduit.

ADJUSTMENT

A WARNING

To reduce the risk of SEVERE INJURY or DEATH:

- Without a properly installed safety reversal system, persons (particularly small children) could be SERIOUSLY INJURED or KILLED by a moving gate.
- Too much force on gate will interfere with proper operation of safety reversal system.
- NEVER increase force beyond minimum amount required to move gate.
- NEVER use force adjustments to compensate for a binding or sticking gate.
- If one control (force or travel limits) is adjusted, the other control may also need adjustment.
- After ANY adjustments are made, the safety reversal system MUST be tested. Gate MUST reverse on contact with a rigid object.
- Keep clear of moving arm while setting limits.

SAFETY

ADDITIONAL FEATURES

WARNING

To prevent SERIOUS INJURY or DEATH from a moving gate:

- Entrapment protection devices MUST be installed to protect anyone who may come near a moving gate.
- Locate entrapment protection devices to protect in BOTH the open and close gate cycles.
- Locate entrapment protection devices to protect between moving gate and RIGID objects, such as posts or walls.

MAINTENANCE AND OPERATION

To reduce the risk of SEVERE INJURY or DEATH:

- READ AND FOLLOW ALL INSTRUCTIONS.
- ANY maintenance to the operator or in the area near the operator MUST NOT be performed until disconnecting the electrical power (AC or solar and battery) and locking-out the power via the operator power switch. Upon completion of maintenance the area MUST be cleared and secured, at that time the unit may be returned to service.
- Disconnect power at the fuse box BEFORE proceeding. Operator MUST be properly grounded and connected in accordance with national and local electrical codes. NOTE: The operator should be on a separate fused line of adequate capacity.
- NEVER let children operate or play with gate controls. Keep the remote control away from children.
- ALWAYS keep people and objects away from the gate. NO ONE SHOULD CROSS THE PATH OF THE MOVING GATE.

- Test the gate operator monthly. The gate MUST reverse on contact with a rigid object or reverse when an object activates the non-contact sensors. After adjusting the force or the limit of travel, retest the gate operator. Failure to adjust and retest the gate operator properly can increase the risk of INJURY or DEATH.
- Use the manual disconnect release ONLY when the gate is not moving.
- KEEP GATES PROPERLY MAINTAINED. Read the owner's manual. Have a qualified service person make repairs to gate hardware.
- ALL maintenance MUST be performed by a LiftMaster professional.
- Activate gate ONLY when it can be seen clearly, is properly adjusted and there are no obstructions to gate travel.
- To reduce the risk of FIRE or INJURY to persons use ONLY LiftMaster part 29-NP712 for replacement batteries.
- SAVE THESE INSTRUCTIONS.

CAUTION

 ALWAYS wear protective gloves and eye protection when changing the battery or working around the battery compartment.

TROUBLESHOOTING

- To protect against fire and electrocution:
- DISCONNECT power (AC or solar and battery) BEFORE installing or servicing operator.

For continued protection against fire:

• Replace ONLY with fuse of same type and rating.

INTRODUCTION

OPERATOR SPECIFICATIONS

This model is intended for use in vehicular swing gate applications:

Gate Classifications: CLASS I, II, III, & IVFull CyMain AC Supply: 120 Vac or 240 VacMaximSolar Power Max: 24 Vdc at 50 watts max.HeaterInput Rating:Maxim• CSW24VI: 10 Amps at 120 Vac or 2 Amps at 240 Vac• 1200• CSW24VH: 12 Amps at 120 Vac• 800Input Rating Excluding Accessory Outlets:• 600• CSW24VI: 4 Amps at 120 Vac or 2 Amps at 240 Vac• B00• CSW24VI: 4 Amps at 120 Vac or 2 Amps at 240 Vac• Ambier

*Input Rating of Accessory Outlets: 6 Amps at 120 Vac

*NOTE: The accessory outlets are not connected for the 240 Vac rating. Main Supply (Motor): 24 Vdc

Accessory Power: 24 V nominal Class II limited to 500 mA

NOTE: Increased accessory power drawn from the operator will shorten the battery back-up duration.

Full Cycle Time: 40 seconds (90 degree opening and closing) Maximum Travel Range: 115 degrees Heater Draw (Optional): 325 watts (120 Vac ONLY) Maximum Gate Weight/Length:

- 1200 lbs./12 foot
- 800 lbs./16 foot
- 600 lbs./18 foot

Daily Cycle Rate AC power: Continuous duty Ambient Temperature:

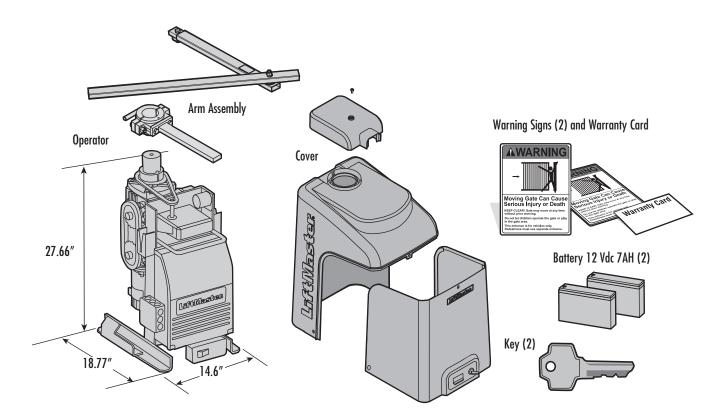

- Without Heater: -20°C to 60°C (-4°F to 140°F)
- With Heater: -40°C to 60°C (-40°F to 140°F)

Fuse Protection Battery: 30 Amp

Fuse Protection DC Power: 30 Amp

CARTON INVENTORY & OPERATOR DIMENSIONS

NOT SHOWN: Documentation Packet

INTRODUCTION

FEATURES

OPERATOR FEATURES

- Advanced "Centerpiece" Control Board
- EMI AC Power Surge Protection and Filter Board
 Main AC voltage input selection: 120 Vac (factory setting) or 240 Vac (field change)
- DC motor with extended brush life
- AC powered with integrated Evercharge battery backup and management
- 24 Vdc accessory power
- **CONTROL BOARD FEATURES**
- Electronic Limit adjustment and control
- Adjustable reversal force
- Adjustable Timer-to-Close (TTC)
- Maximum Run Timer
- Bipart Delay switch (dual gate applications)
- Feedback and Diagnostic LEDs

EXPANSION BOARD FEATURES

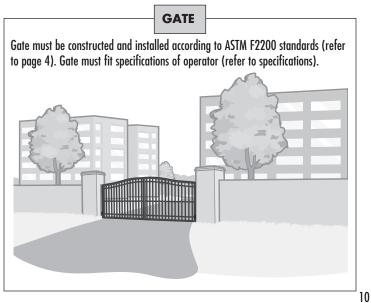

- Plug-in Loop Detector Connectors (Model LOOPDETLM Loop Detector)
 SHADOW
 - INTERRUPT
 - EXIT, with Fail Safe/Fail Secure selection
- Quick-Close ON/OFF selection switch
- AC Fail Open/Battery selection switch
- Low Battery Open/Close selection switch
- Anti-Tail ON/OFF selection switch
- Single Button Control (SBC) accessory connection
- 3-Button station accessory connection

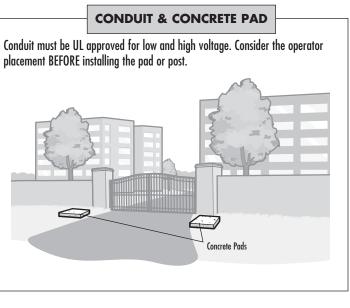

- Manual Secure power failure selection
 SAMS accuration
- SAMS compatible
- Slow-start and slow-stop gate motion
- Reset Button
- Audible Alarm
- Internal Heater option (factory installed or field installed) 120 Vac powered ONLY
- Non-Scissor Action swing arm with easy arm disconnect
- Integrated internal antenna with external antenna option
- Electronic limit adjustment and control from the remote control
- Wireless primary/secondary (refer to pages 20 and 21)
- COMMANDS:
 - OPEN, CLOSE, or STOP: accessory connection and on-board button
 - FIRE DEPARTMENT OPEN: accessory connection
 - INTEGRATED RADIO RECEIVER
- LOOPS:
 - EXIT, SHADOW, or INTERRUPT LOOP: accessory connection
- AUX Relays (2) each independently selectable operation:
 - OPEN LIMIT: ON at open limit switch
 - CLOSE LIMIT: OFF at close limit switch
 - GATE MOVING: ON with gate moving
 - PRE-ALERT DELAY: ON 3 seconds before gate motion
 - TAMPER: ON when gate manually pulled from close limit
 - POWER: ON with AC or Solar power available
 - CYCLE QUANTITY: LEDs blink operational cycle count

PREPARATION SITE PREPARATION

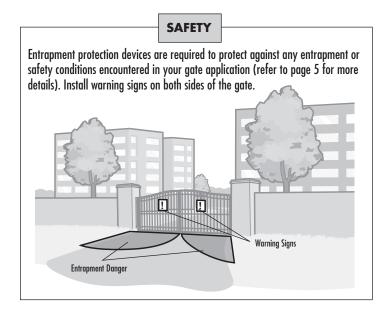

Check the national and local building codes **BEFORE** installation.

SITE PREPARATION

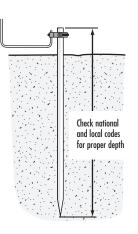

VEHICLE LOOPS

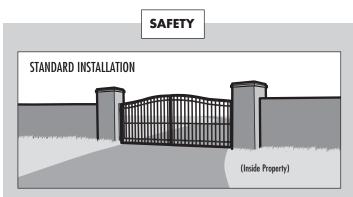

The vehicle loops allow the gate to stay open when vehicles are obstructing the gate path. Suggested for vehicles 14 feet (4.27 m) or longer. Vehicle loops are not required but are recommended.

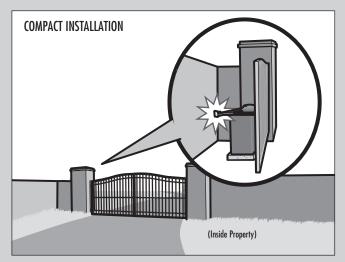

EARTH GROUND ROD

Proper grounding gives an electrical charge, such as from an electrical static discharge or a near lightning strike, a path from which to dissipate its energy safely into the earth. Without this path, the intense energy generated by lightning could be directed towards the gate operator. Although nothing can absorb the tremendous power of a direct lightning strike, proper grounding can protect the gate operator in most cases.

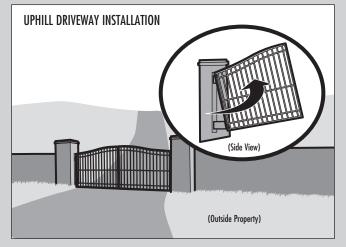

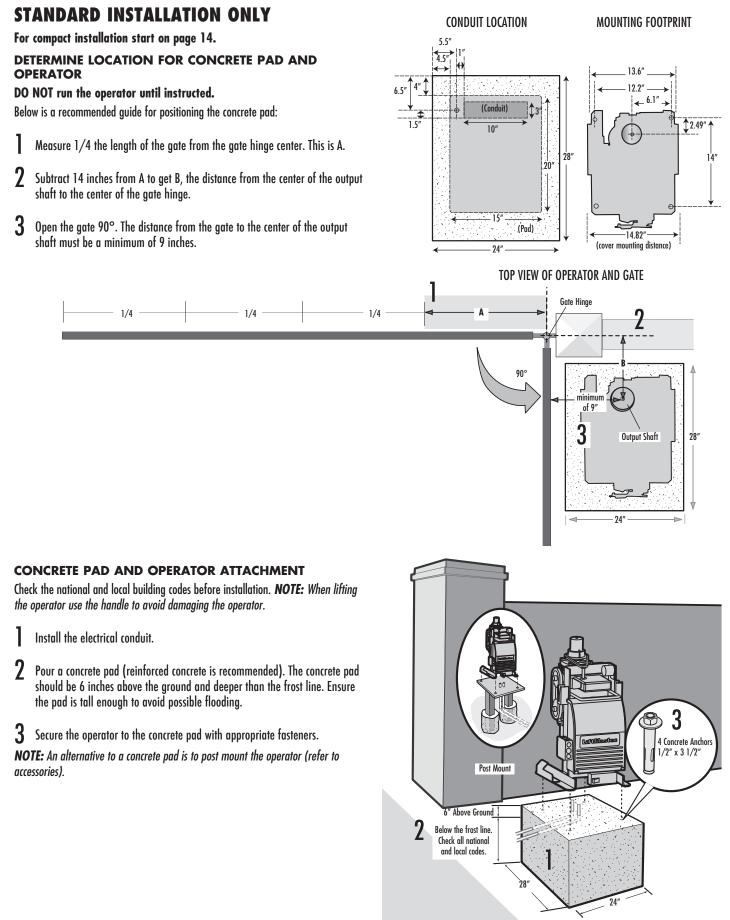

The illustration is an example of a compact installation. If the operator arm will hit an obstruction when the gate is in the open position follow the directions for Compact Installation.

The illustration is an example of an uphill driveway installation. If installing the operator on a hill, a special swivel arm and hinges are required (not provided).

STANDARD INSTALLATION ONLY

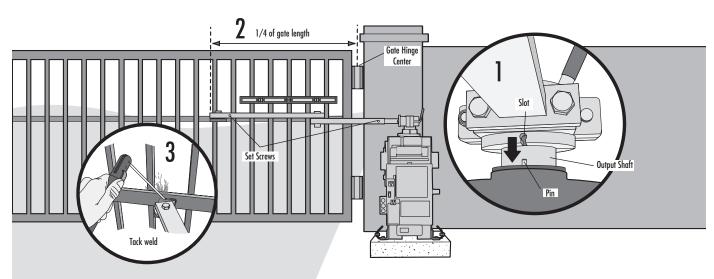

STANDARD INSTALLATION ONLY

POSITION THE GATE BRACKET

NOTE: It may be necessary to attach horizontal reinforcement to the gate before attaching the gate bracket.

Position the operator arm onto the output shaft so that the pin slides into the slot.

3 Make sure the operator arm is level and tack weld the gate bracket in this position. Use the set screws on the arm to temporarily hold the arm in place while determining the correct measurements.

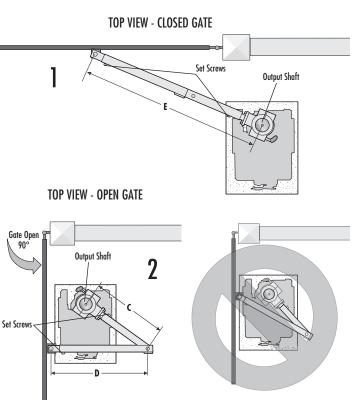

ADJUST THE OPERATOR ARM LENGTH

NOTE: The length of the arm can be adjusted if necessary. If adjusting the length, ensure that both sections of the arm are adjusted proportionally. Use the set screws on the arm to temporarily hold the arm in place while determining the correct measurements.

- Close the gate and measure the distance of the operator arm from the gate bracket to the output shaft center. This distance is E.
- 2 Open the gate 90° (do not allow arms to scissor when open). Measure both sections of the arm (D and C). The arm lengths are correct as long as C+D=E (arm should be perpendicular to the gate in the open position as shown).

 $[\]mathbf{2}$ Measure 1/4 the length of the gate from the hinge center.

COMPACT INSTALLATION ONLY

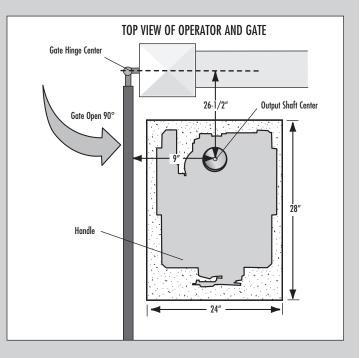

COMPACT INSTALLATION ONLY

DETERMINE LOCATION FOR CONCRETE PAD AND OPERATOR

DO NOT run the operator until instructed.

Refer to the illustration to determine the measurements and location of the concrete pad.

NOTE: When lifting the operator use the handle to avoid damaging the operator.

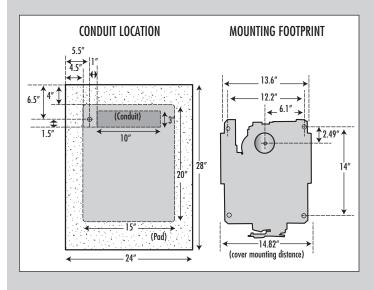

CONCRETE PAD AND OPERATOR ATTACHMENT

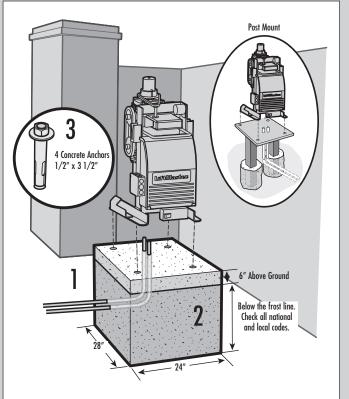

Check the national and local building codes before installation.

- Install the electrical conduit.
- Pour a concrete pad (reinforced concrete is recommended). The concrete pad should be 6 inches above the ground and deeper than the frost line. Ensure the pad is tall enough to avoid possible flooding.

3 Secure the operator to the concrete pad with appropriate fasteners. **NOTE:** An alternative to a concrete pad is to post mount the operator (refer to

accessories).

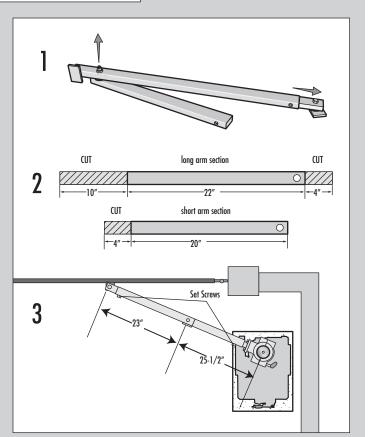

COMPACT INSTALLATION ONLY

COMPACT INSTALLATION ONLY

SHORTEN THE OPERATOR ARM

For a compact installation the operator arm will have to be shortened.

- Take the operator arm apart and remove the inner sleeves from the outer tubing.
- $\mathbf 2$ Cut the outer tubing of the operator arm sections to the lengths shown.
- **3** Put the arm back together and adjust the arm to the measurements as shown. Use the set screws on the arm to temporarily hold the arm in place while determining the correct measurements.

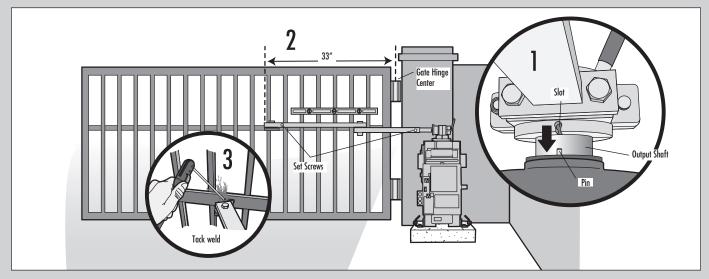

POSITION THE GATE BRACKET

NOTE: It may be necessary to attach horizontal reinforcement to the gate before attaching the gate bracket. Use the set screws on the arm to temporarily hold the arm in place while determining the correct measurements.

Position the operator arm onto the output shaft so that the pin slides into the slot.

2 Measure 33 inches from the gate hinge center.

3 Make sure the operator arm is level and tack weld the gate bracket in this position.

INSTALLATION CONTINUED...

INSTALLATION CONTINUED...

WELD THE OPERATOR ARM

Once the operator arm measurements are verified:

- Weld the gate bracket to the gate.
- 2 Weld the short arm section.
- **3** Weld the long arm section.

90° position).

does not slip on the output shaft.

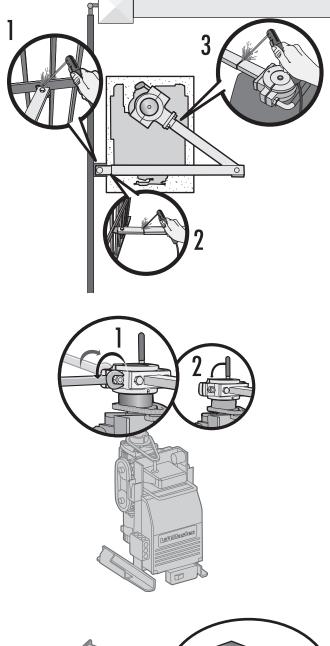

2

4 Remove the set screws from the arm. **NOTE:** Completely weld around the outer tubing and bracket.

SECURE THE OPERATOR ARM TO THE OUTPUT SHAFT

Adjust the nuts on the operator arm so the operator arm fits snug on the output shaft yet still allows enough room to swivel (the handle must be in a

Tighten the handle by pushing it down. Test to make sure the operator arm

Top Gear Box Nent Plug

REMOVE THE PINS FROM THE VENT PLUGS

Remove the pin from the vent plug on both the top and bottom gear boxes.

WIRING

WIRE THE ENTRAPMENT PROTECTION DEVICES + EARTH GROUND ROD

WIRE THE ENTRAPMENT PROTECTION DEVICES

Entrapment protection devices are required. Refer to page 5 for more information regarding application.

A WARNING

To prevent SERIOUS INJURY or DEATH from a moving gate:

- Entrapment protection devices MUST be installed to protect anyone who may come near a moving gate.
- Locate entrapment protection devices to protect in BOTH the open and close gate cycles.
- Locate entrapment protection devices to protect between moving gate and RIGID objects, such as posts or walls.
- Connect the entrapment protection device to the EYES EDGE terminal on the control board:
 - Close Photoelectric Sensor Entrapment Protection: Connect wires from the photoelectric sensors to the Inputs on the CLOSE EYES/INTERRUPT terminal.
 - Close Edge Entrapment Protection: Connect wires from the entrapment protection device to the Inputs on the CLOSE EDGE terminal.
 - Open Entrapment Protection: Connect wires from the entrapment protection device to the Inputs on the OPEN EYES/EDGE terminal.

NOTE: Refer to the "Accessory Features on the Control Board" section on page 31.

TO ERASE LEARNED MONITORED PHOTOELECTRIC SENSORS

- Remove the photoelectric sensor wires from the terminal block.
- Press the SET OPEN and SET CLOSE buttons simultaneously until the SET OPEN and SET CLOSE LEDs turn on.
- **3** Press both SET OPEN and SET CLOSE buttons again to turn off the SET OPEN and SET CLOSE LEDs.

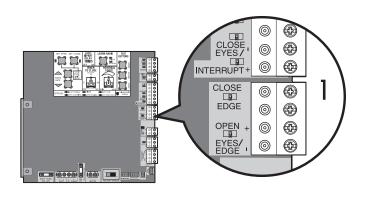

NOTE: For dual gate applications repeat the steps above on the other operator.

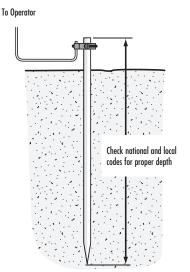

EARTH GROUND ROD

Use the proper earth ground rod for your local area. The ground wire must be a single, whole piece of wire. Never splice two wires for the ground wire. If you should cut the ground wire too short, break it, or destroy its integrity, replace it with a single wire length.

- Install the earth ground rod within 3 feet of the operator.
- $\mathbf 2$ Run wire from the earth ground rod to the operator.

NOTE: If the operator is not grounded properly the range of the remote controls will be reduced.

WIRING

POWER WIRING

260

POWER WIRING

This operator can be wired for either 120 Vac or 240 Vac or a solar panel (not provided). Follow the directions according to your application. For dual gate applications, power will have to be connected to each operator. Main power supply and control wiring MUST be run in separate conduits.

AMERICAN WIRE GAUGE (AWG)	MAXIMUM WIRE LENGTH (120 VAC)	MAXIMUM WIRE LENGTH (240 VAC)
14	130 feet	260 feet
12	205 feet	410 feet
10	325 feet	650 feet
8	520 feet	1040 feet
6	825 feet	1650 feet

NOTE: Use copper conductors ONLY.

AC POWER SWITCH

The AC Power switch on the operator will turn the incoming 120/240 Vac power ON or OFF. The operator's AC Power switch ONLY turns off AC power to the control board and DOES NOT turn off battery power.

240 VAC ONLY

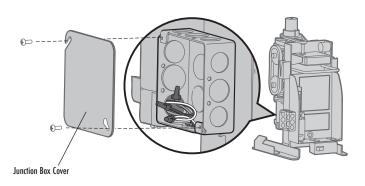

If using the 240 Vac option a heater cannot be used. The accessory outlet is disabled and cannot be used with the 240 Vac option.

- Remove the outlet housing from the electrical box by removing the screws (2).
- **2** Pull the outlet housing out and locate the power wiring connector on the EMI board.
- **3** Unplug the power wiring connector from the 120 Vac socket (factory default location) and plug it into the 240 Vac socket.
- 4 Replace the outlet housing by securing with the screws. The operator is now set for 240 Vac operation.

WIRING POWER WIRING CONTINUED...

120 VAC AND 240 VAC

- Turn off the AC power from the main power source circuit breaker.
- **2** Run the AC power wires to the operator.
- **3** Remove the junction box cover.
- 4 Connect the green wire to the earth ground rod and AC ground using a wire nut. NOTE: The earth ground rod can be grounded to the chassis.
- 5 Connect the white wire to NEUTRAL using a wire nut.
- 6 Connect the black wire to HOT using a wire nut.
- 7 Replace the junction box cover. Ensure the wires are not pinched.

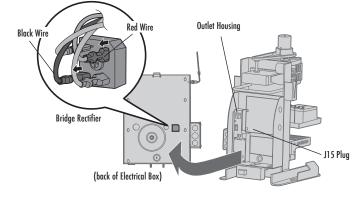

SOLAR PANEL(S)

NOT PROVIDED. SEE ACCESSORIES.

For solar applications DO NOT use the expansion board and the wireless dual gate feature. These features will substantially decrease the cycle rate and standby time of the operator. The solar panel(s) must be located in an open area clear of obstructions and shading for the entire day. The gate operator is not supported in northern climates where temperatures reach below -4°F. This is due to cold weather and a reduced number of hours of sunlight during the winter months. Cycle rate may vary from solar chart for areas that reach below 32°F. Solar panels should be cleaned on a regular basis for best performance to ensure proper operation. For solar applications, a minimum of two 10W solar panels in series and two 7AH batteries are recommended. For Zone 3 cold weather sites, two 33AH batteries are recommended. We recommend LiftMaster low power draw accessories to minimize power draw, refer to accessory page.

- Remove the outlet housing from the chassis by removing the screws (2).
- $\mathbf 2$ Remove the electrical box from the chassis by removing the 4 corner screws.
- 3 Locate the red and black wires connected to the J15 plug labeled DC POWER on the control board. Unplug the wires from the bridge rectifier located on the back of the electrical box.
- 4 Connect the red (+) wire from the J15 plug to the red wire from the solar panel.
- 5 Connect the black (-) wire from the J15 plug to the black wire from the solar panel.
- 6 Reassemble the operator.

NUMBER OF CYCLES PER DAY (SOLAR)

WIRING

DUAL GATES ONLY

There are two options for dual gate communication: wired or wireless. Follow the directions according to your application. Do not use wired and wireless communication simultaneously. Wired dual gate applications will have a longer battery standby time than wireless applications.

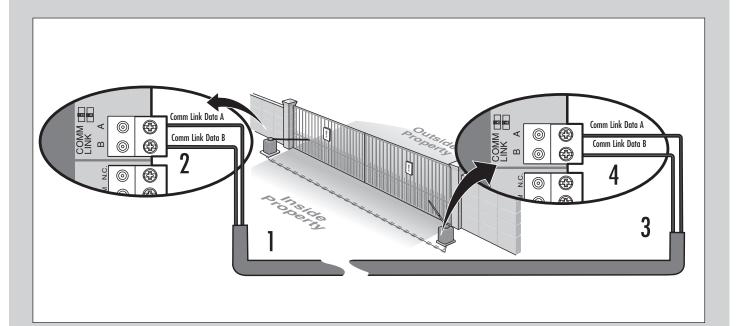

WIRED DUAL GATES

Before digging, contact local underground utility locating companies. Use PVC conduit to prevent damage to cables.

- Trench across driveway to bury the extension cable.
- 2 Connect the wires from the extension cable to the Comm Link terminals on the primary gate operator control board.
- **3** Route the extension cable to the secondary gate operator's control board.
- 4 Connect the wires from the extension cable to the Comm Link terminals on the secondary control board (Comm Link A to Comm Link A and Comm Link B to Comm Link B).

DUAL GATE WIRE TYPE (STRANDED COPPER WIRE)

22AWG up to 200 feet (61 m)	18AWG - 200-1000 feet (61-305 m)				
Wire must be rated at 30 Volt minimum					

DUAL GATES ONLY

WIRELESS DUAL GATES

WIRING

Turn on power to the operator.

TO ACTIVATE THE WIRELESS FEATURE:

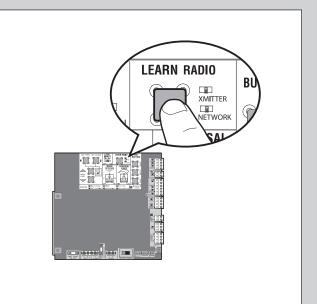

- Choose an operator to be the network primary operator. All wireless accessories will need to be programmed to the primary operator.
- **2** Press and release the LEARN RADIO button on the primary operator. The green XMITTER LED will light.
- **3** Press and release the LEARN RADIO button again on the primary operator. The NETWORK LED will light.
- 4 Press and release the OPEN test button to assign this operator as network primary.
- 5 Press and release the LEARN RADIO button on the second operator. The green XMITTER LED will light.
- 6 Press and release the LEARN RADIO button again on the second operator. The NETWORK LED will light.
- Press and release the CLOSE test button to assign this operator as network second.

Both operators will beep and the NETWORK LEDs will turn off indicating programming is successful.

TO DEACTIVATE THE WIRELESS FEATURE:

- Press and release the LEARN RADIO button on either operator. The green XMITTER LED will light.
- 2 Press and release the LEARN RADIO button again on the same operator. The yellow NETWORK LED will light.
- **3** Press and hold the LEARN RADIO button for 5 seconds. The yellow NETWORK LED will blink (operator will beep) then turn off indicating successful deactivation.

Repeat the steps for the other operator.

WIRING

DUAL GATES ONLY + CONNECT BATTERIES

DUAL GATES ONLY

BIPART DELAY/SYNCHRONIZED CLOSE

The LOCK/BIPART DELAY switch is used only with dual gate applications and serves two functions:

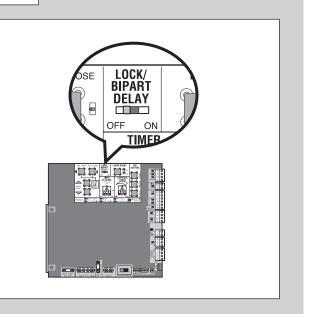

• BIPART DELAY

SWING GATE APPLICATIONS: The BIPART DELAY is used in applications where a mag-lock, solenoid lock, or decorative overlay would require one gate to close before the other. The operator with the LOCK/BIPART DELAY switch ON will delay from the close limit when opening and be the first to close from the open limit.

SLIDE GATE APPLICATIONS: Not applicable, set to OFF.

• SYNCHRONIZED CLOSE

The BIPART DELAY is also used in applications where one gate travels a longer distance than the other. To synchronize the closing of the gates, set the LOCK/BIPART DELAY switch to ON for both operators.

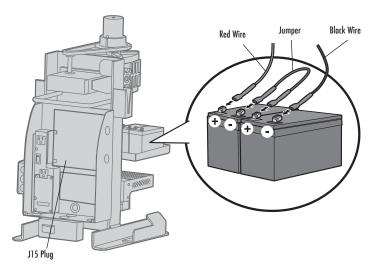

CONNECT BATTERIES

7AH BATTERIES

The batteries are charged in the circuit by the integrated transformer. The batteries are for battery backup or solar installation.

- Turn OFF AC power to the operator.
- 2 Unplug the J15 plug labeled BATT on the control board by squeezing the plug and pulling it from the control board.
- 3 Connect a jumper between the positive (+) terminal of one battery to the negative terminal (-) of the other battery.
- 4 Connect the red wire from the J15 plug to the positive (+) terminal of the battery.
- 5 Connect the black wire from the J15 plug to the negative (-) terminal of the battery.
- **6** Plug the J15 plug back into the control board. This will power up the control board.
- **7** Turn ON AC power to the operator.
- **8** Turn ON the AC power switch on the operator.

WIRING

CONNECT BATTERIES

CONNECT BATTERIES

33AH BATTERIES

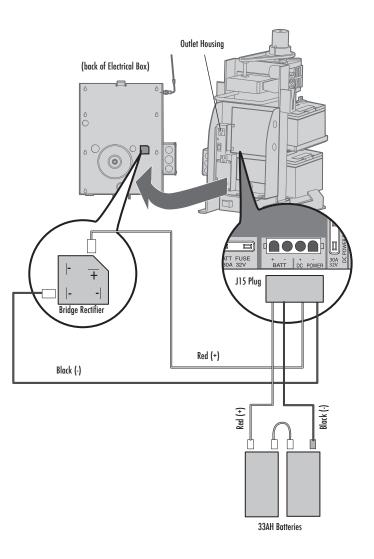

The batteries are charged in the circuit by the integrated transformer. The batteries are for battery backup or solar installation. The 33AH application requires the 33AH battery harness (Model K94-36596) and an additional battery tray (Model K10-36183) to allow more space in the enclosure. The heater option cannot be used with the 33AH battery application.

_		
Ren	love	the

1

outlet housing from the chassis by removing the screws (2).

- 2 Remove the electrical box from the chassis by removing the 4 corner screws.
- 3 Disconnect the red (+) and black (-) wires going from the bridge rectifier to the J15 plug labeled DC POWER on the control board.
- 4 Connect the red (+) and black (-) wires from the new 33AH harness to the bridge rectifier.
- 5 Reassemble the operator.
- 6 Connect a jumper between the positive (+) terminal of one battery to the negative (-) terminal of the other battery.
- 7 Connect the red wire from the J15 plug to the positive (+) terminal of the battery.
- 8 Connect the black wire from the J15 plug to the negative (-) terminal of the battery.
- 9 Turn ON AC power to the operator.
- 10 Turn ON the AC power switch on the operator.
- Plug the J15 plug back into the control board.

ADJUSTMENT

LIMIT AND FORCE ADJUSTMENT

A WARNING

To reduce the risk of SEVERE INJURY or DEATH:

- Without a properly installed safety reversal system, persons (particularly small children) could be SERIOUSLY INJURED or KILLED by a moving gate.
- Too much force on gate will interfere with proper operation of safety reversal system.
- NEVER increase force beyond minimum amount required to move gate.
- NEVER use force adjustments to compensate for a binding or sticking gate.
- If one control (force or travel limits) is adjusted, the other control may also need adjustment.
- After ANY adjustments are made, the safety reversal system MUST be tested. Gate MUST reverse on contact with a rigid object.
- Keep clear of moving arm while setting limits.

INTRODUCTION

Your operator is designed with electronic controls to make travel limit and force adjustments easy. The adjustments allow you to program where the gate will stop in the open and close position. The electronic controls sense the amount of force required to open and close the gate. The force is adjusted automatically when you program the limits but should be fine tuned using the REVERSAL FORCE dial on the control board (refer to Fine Tune the Force section) to compensate for environmental changes.

The limits can be set using the control board (below) or a remote control (refer to Limit Setup with a Remote Control in the Additional Features section). Setting the limits with a remote control requires a 3-button remote control programmed to OPEN, CLOSE, and STOP.

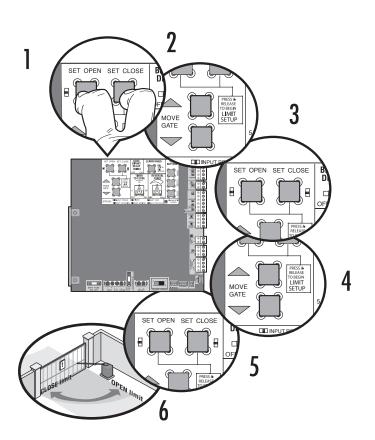

INITIAL LIMITS AND FORCE ADJUSTMENT

For dual gate applications the limits will have to be set for each operator. The gate MUST be attached to the operator before setting the limits and force.

- Press and release the SET OPEN and SET CLOSE buttons simultaneously to enter limit setting mode.
- 2 Press and hold one of the MOVE GATE buttons to move the gate to the open or close limit.
- **3** Press and release the SET CLOSE or SET OPEN button depending on which limit is being set.
- **4** Press and hold one of the MOVE GATE button to move the gate to the other limit.
- 5 Press and release the SET CLOSE or SET OPEN button depending on which limit is being set.
- **6** Cycle the gate open and close. This automatically sets the force.

When limits are set properly the operator will automatically exit limit setting mode.

LIMIT SETUP LEDS			
SET OPEN LED	SET CLOSE LED	OPERATOR MODE	EXPLANATION
BLINKING	BLINKING	NORMAL MODE	Limits are not set.
OFF	OFF	NORMAL MODE	Limits are set.
BLINKING	BLINKING	LIMIT SETTING MODE	Limits are not set.
BLINKING	ON	LIMIT SETTING MODE	Open limit is not set.
ON	BLINKING	LIMIT SETTING MODE	Close limit is not set.
ON	ON	LIMIT SETTING MODE	Limits are set.

ADJUSTMENT

LIMIT AND FORCE ADJUSTMENT + OBSTRUCTION TEST

FINE TUNE THE FORCE

The FORCE DIAL on the control board is used for fine tuning the force in cases where wind or environmental changes may affect the gate travel.

Based on the length and weight of the gate it may be necessary to make additional force adjustments. The force setting should be high enough that the gate will not reverse by itself nor cause nuisance interruptions, but low enough to prevent serious injury to a person. The force setting is the same for both the open and close gate directions.

- Open and close the gate with the TEST BUTTONS.
- 2 If the gate stops or reverses before reaching the fully open or closed position, increase the force by turning the force control slightly clockwise.
- **3** Perform the "Obstruction Test" after every force setting adjustment (see below).

ADJUST THE LIMITS

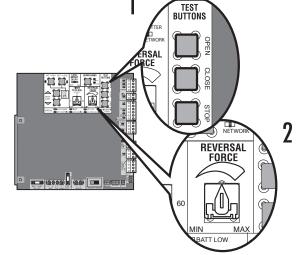

If the limits have already been set the operator will exit the limit setting mode after resetting each limit. Each limit is set separately by following steps 1-3 of the Initial Limit and Force Adjustment section.

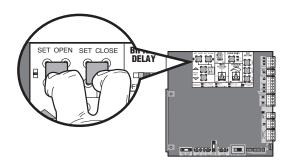

ERASE LIMITS

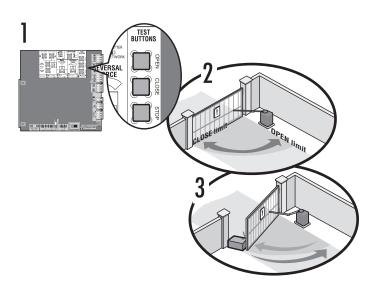

- To erase the limits, press and hold the SET OPEN and SET CLOSE buttons simultaneously (5 seconds) until both the SET OPEN and SET CLOSE LEDs blink rapidly and the operator beeps.
- 2 Release the buttons and the SET OPEN and SET CLOSE LEDs will blink slowly indicating the limits will need to be set.

OBSTRUCTION TEST

The operator is equipped with an automatic obstruction sensing feature. If the gate encounters an obstruction during motion, the operator will automatically reverse direction of the gate for a short time and then stop the gate. After any adjustments are made, test the operator:

- Open and close the gate with the TEST BUTTONS, ensuring that the gate is stopping at the proper open and close limit positions.
- Place a solid object between the open gate and a rigid structure. Ensure that the gate, the solid object, and the rigid structure can withstand the forces generated during this obstruction test.
- 3 Run the gate in the close direction. The gate should stop and reverse upon contact with the solid object. If the gate does not reverse off the solid object, reduce the force setting by turning the force control slightly counter-clockwise. The gate should have enough force to reach both the open and close limits, but MUST reverse after contact with a solid object.
- 4 Repeat the test for the open direction.

PROGRAMMING

REMOTE CONTROLS

A total of 50 Security + 2.0TM remote controls and 2 keyless entries (1 PIN for each keyless entry) can be programmed to the operator. **NOTE:** When the memory is full the operator will exit programming mode and the remote control/keyless entry will not be programmed. The memory will need to be erased before programming any additional remote controls/keyless entries. If installing an 86LM to extend the range of the remote controls D0 N0T bend the antenna.

TO ADD OR REPROGRAM A REMOTE CONTROL (NOT PROVIDED)

- Press and release the LEARN RADIO button (operator will beep and green XMITTER LED will light).
- Press the remote control button for the desired function. The operator will automatically exit learn mode (operator will beep and green XMITTER LED will go out) if programming is successful.

PROGRAM OPEN ONLY ON A 1-BUTTON REMOTE CONTROL

- Press and release the LEARN RADIO button (operator will beep and green XMITTER LED will light).
- **2** Press the OPEN button.
- **3** Press the remote control button. The operator will automatically exit learn mode (operator will beep and green XMITTER LED will go out) if programming is successful.

To program additional Security \pm 2.0TM remote controls, repeat the steps until all the remote controls are programmed.

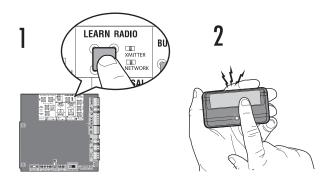

PROGRAM OPEN, STOP, AND CLOSE ON A 3-BUTTON REMOTE CONTROL

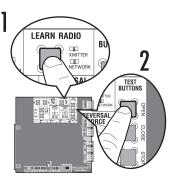

- Press and release the LEARN RADIO button (operator will beep and green XMITTER LED will light).
- Press the OPEN, CLOSE, or STOP button for the desired function.
- **3** Press the remote control button for the desired function. The operator will automatically exit learn mode (operator will beep and green XMITTER LED will go out) if programming is successful.

ERASE ALL CODES

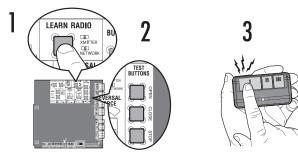

- Press and release the LEARN RADIO button (operator will beep and green XMITTER LED will light).
- Press and hold the LEARN RADIO button again until the green XMITTER LED goes out (approximately 6 seconds). All remote control codes are now erased.

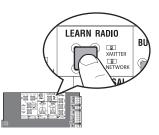

NOTICE: To comply with FCC and/or Industry Canada (IC) rules, adjustment or modifications of this transceiver are prohibited. THERE ARE NO USER SERVICEABLE PARTS. This device complies with Part 15 of the FCC rules and IC RSS-210. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

AVIS : Les règles de la FEC et/ou d'Industrie Canada (IC) interdisent tout ajustement ou toute modification de ce récepteur. IL N'EXISTE AUCUNE PIÈCE SUSCEPTIBLE D'ÊTRE ENTRETENUE PAR L'UTILISATEUR.

Cet appareil est conforme aux dispositions de la partie 15 du règlement de la FCC et de la norme IC RSS-210. Son utilisation est assujettie aux deux conditions suivantes : (1) ce dispositif ne peut causer des interférences nuisibles, et (2) ce dispositif doit accepter toute interférence reçue, y compris une interférence pouvant causer un fonctionnement non souhaité.

FINISH INSTALLATION

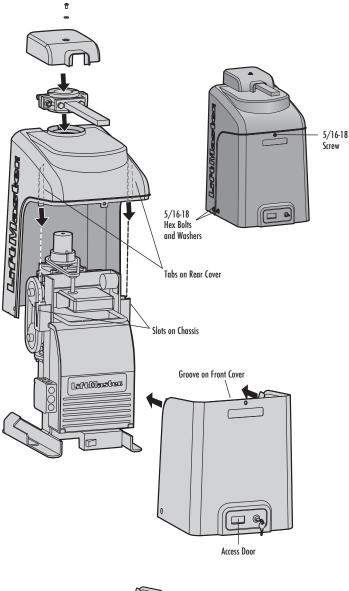

INSTALL THE COVER

INSTALL THE COVER

The operator cover consists of two pieces: a rear cover and a front cover. The front cover can easily be removed to access the electrical box. To access the reset switch slide the access door up. The front cover and access door can be locked with the key.

TO INSTALL THE COVER

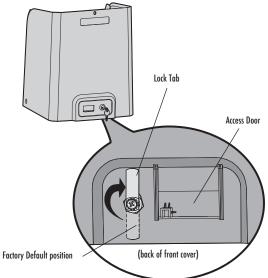

- Remove the operator arm from the output shaft by releasing the handle.
- **2** Align the tabs on the rear cover with the slots on the chassis and place the cover over the operator.
- **3** Secure both sides of the rear cover to the chassis with two 5/16-18 hex bolts and washers.
- 4 Reattach the operator arm to the output shaft (making sure the pin fits into the slot) and secure by pushing the handle down.
- 5 Place the operator arm cover over the operator arm and secure.
- 6 Align the front cover with the back cover, making sure the grooves line up.
- Secure the front cover to the chassis with two 5/16-18 hex bolts and washers.
- 8 Secure the front cover to the rear cover using the 5/16-18 screw.

TO LOCK THE ACCESS DOOR

From the factory the access door for the reset switch will not be locked. To lock the access door follow the steps below:

- Locate the lock tab on the back of the front cover and remove the screw securing the tab to the cover.
- **2** Turn the tab 180 degrees, then secure with the screw. The access door can now be locked.

The basic installation is complete.

MANUAL DISCONNECT + RESET SWITCH + REMOTE CONTROL + HEATER (IF APPLICABLE)

OPERATION

MANUAL DISCONNECT

Press the reset switch to RESET/DISCONNECT. Release the handle on the operator arm to allow the gate to be opened and closed manually. On a dual gate application the handle must be released on both operators. To resume normal function tighten the handle by pushing it down.

RESET SWITCH

The reset switch is located on the front of the operator and serves several functions.

Toggling the reset switch will stop a moving gate during a normal open/close cycle, like a stop button. The operator does not need to be reset after doing this. The reset switch will disable the gate in the present position and will energize the solenoid lock for two minutes and disable the maglock for two minutes.

OPERATOR ALARM

If a contact sensor detects an obstruction twice consecutively the alarm will sound (up to 5 minutes) and the operator will need to be reset. If a command is given after the initial 5 minutes the operator will beep.

When the inherent force of the operator (RPM/current sensor) detects the following (twice consecutively) the alarm will sound (up to 5 minutes) and the operator will need to be reset:

- A. The operator arm or gate is incorrectly installed.
- B. The gate does not meet specifications.
- C. Gate hinges are too tight or broken and the gate is not moving freely.
- D. The gate is moving and a car pushes the gate.
- E. A foreign object is on the gate frame while the gate is moving.
- F. The gate hits the driveway or curb and gets stuck or bent in an awkward position.

Remove any obstructions. Press the reset button to shut off the alarm and reset the operator. After the operator is reset, normal functions will resume.

The operator alarm will beep 3 times with a command if the battery is low.

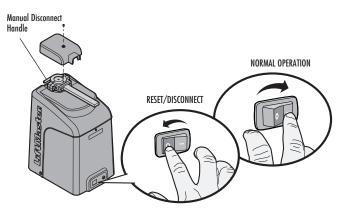

REMOTE CONTROL

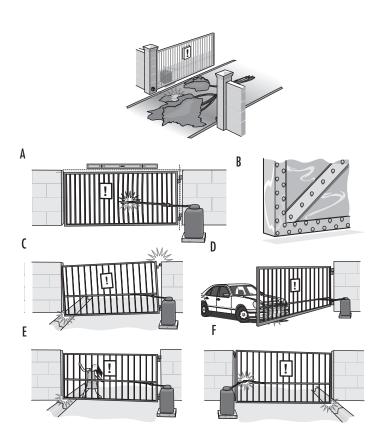

Once the remote control has been programmed the operator will operate as follows: When gate is in the closed position, activation of the remote control button will open the gate. During the open cycle another activation of the remote control will stop the gate and the next activation of the remote control will close the gate.

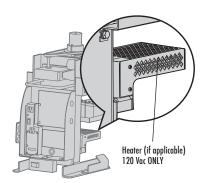

When the gate is in the open position, activation of the remote control button will close the gate. If the remote control is activated while the gate is closing, the gate will stop and the next activation will open the gate.

HEATER (IF APPLICABLE)

The operator may have a heater installed, depending on the model purchased. The heater must be powered by 120 Vac ONLY. If the heater switch is left in the "ON" position, the heater will turn on and off automatically when needed.

ADDITIONAL FEATURES

GATE OPERATOR SETUP EXAMPLES

GATE OPERATOR SETUP EXAMPLES

The following are example setups for the gate operator. Your specific site requirements may be different. Always setup the operator system to the site requirements, including all necessary secondary entrapment protection systems.

RESIDENTIAL SMALL: One to four residential homes sharing a gated entrance/exit, allowing vehicle access trumps security concerns

RESIDENTIAL LARGE: A residential community (more than four homes) having one or more gated entrances/exits, allowing vehicle access trumps security concerns **COMMERCIAL:** Business site where security (gate closed) is important

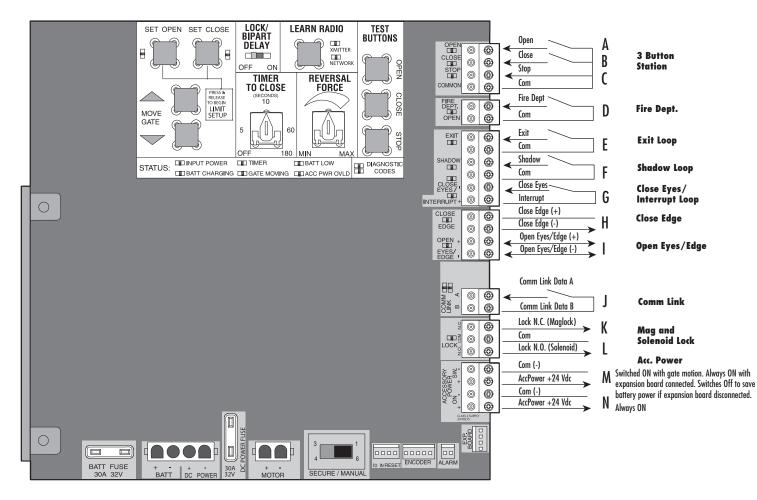

INDUSTRIAL: Large business site where security is required

Setting	RESIDENTIAL SMALL	RESIDENTIAL LARGE	COMMERCIAL	INDUSTRIAL
Quick Close switch setting	Normally set to OFF. Normal gate close (timer or control).	Normally set to OFF. Normal gate close (timer or control).	Normally set to OFF. Normal gate close (timer or control).	Set to ON, so that gate closes immediately after vehicle passes CLOSE EYES/Interrupt loop.
AC Fail Open switch setting	Normally set to BATT. Run on battery if AC power fails.	Normally set to BATT. For local jurisdiction requirement, set to OPEN so that gate immediately opens upon AC power fail.	Normally set to BATT. Run on battery if AC power fails.	Normally set to BATT. Run on battery if AC power fails.
Low Battery switch setting	Normally set to OPEN. If powered from battery and battery is low, gate stays open.	Normally set to OPEN. If powered from battery and battery is low, gate stays open.	Normally set to CLOSE. If powered from battery and battery is low, gate stays close.	Normally set to CLOSE. If powered from battery and battery is low, gate stays close.
Anti-Tail switch setting	Normally set to OFF. CLOSE EYES/ Interrupt loop reverses a closing gate.	Normally set to OFF. CLOSE EYES/ Interrupt loop reverses a closing gate.	Set to ON. In attempt to prevent vehicle tail-gating, CLOSE EYES/ Interrupt loop pauses a closing gate.	Set to ON. In attempt to prevent vehicle tail-gating, CLOSE EYES/ Interrupt loop pauses a closing gate.
Bipart Delay switch setting	For DUAL-GATE site, set to ON for gate that delays upon opening	For DUAL-GATE site, set to ON for gate that delays upon opening	For DUAL-GATE site, set to ON for gate that delays upon opening	For DUAL-GATE site, set to ON for gate that delays upon opening
Aux Relay Out – Open Limit Switch	Typically not required.	Use with SAMS (Sequence Access Management System)	 Use with SAMS (Sequence Access Management System) Connect "Gate Open" indicator (e.g. light) 	 Use with SAMS (Sequence Access Management System) Connect "Gate Open" indicator (e.g. light)
Aux Relay Out – Close Limit Switch	Typically not required.	Typically not required.	Connect "Gate Close/Secure" indicator (e.g. light)	Connect "Gate Close/Secure" indicator (e.g. light)
Aux Relay Out – Gate Motion	Attach alert signal (audible or visual alert system)			
Aux Relay Out – Pre-Motion Delay (Expansion Board Inputs)	Attach alert signal (audible or visual alert system)			
Aux Relay Out – Power	Attach visual alert to know when system is charging batteries (i.e. not running on batteries)	Attach visual alert to know when system is charging batteries (i.e. not running on batteries)	Attach visual alert to know when system is charging batteries (i.e. not running on batteries)	Attach visual alert to know when system is charging batteries (i.e. not running on batteries)
Aux Relay Out – Tamper (Slide Gates Only)	Attach alert signal (audible or visual alert system) to indicate if gate is manually tampered with by being pushed off of close limit	Attach alert signal (audible or visual alert system) to indicate if gate is manually tampered with by being pushed off of close limit	Attach alert signal (audible or visual alert system) to indicate if gate is manually tampered with by being pushed off of close limit	Attach alert signal (audible or visual alert system) to indicate if gate is manually tampered with by being pushed off of close limit
Cycle Quantity Feedback	Use during servicing only to determine operator cycles	Use during servicing only to determine operator cycles	Use during servicing only to determine operator cycles	Use during servicing only to determine operator cycles
Fire Dept Open input	Typically not required.	Connect emergency access system (Knox box switch, SOS system, etc.)	Typically not required.	Typically not required.
Heater Option	Suggested use if outside temperature remain below 0°F (-20°C).			

ADDITIONAL FEATURES

CONTROL BOARD OVERVIEW

SET OPEN Button	The SET OPEN button sets the OPEN limit. See Adjust Limits section.	
SET CLOSE Button	The SET CLOSE button sets the CLOSE limit. See Adjust Limits section.	
MOVE GATE Button	/E GATE Button The MOVE GATE buttons will either open or close the gate when the operator is in Limit setting mode. See Adjust Limits section.	
BIPART DELAY Switch	ch The LOCK/BIPART DELAY switch is used only for dual gates. See Bipart Delay section.	
LEARN Button	The LEARN RADIO button is for programming remote controls and the network.	
TIMER-TO-CLOSE dial	The TIMER-TO-CLOSE (TTC) dial can be set to automatically close the gate after a specified time period. The TTC is factory set to OFF. If the TTC is set to the OFF position, then the gate will remain open until the operator receives another command from a control. Rotate the TIMER-TO-CLOSE dial to the desired setting. The range is 0 to 180 seconds, 0 seconds is OFF.	
	NOTE: Any radio command, single button control, or CLOSE command on the control board prior to the TTC expiring will close the gate. The TTC is reset by any signals from the open controls, loops, close edges, and close photoelectric sensors (IR's).	
REVERSAL FORCE dial	REVERSAL FORCE dial The REVERSAL FORCE dial adjusts the force. See Force Adjustment section.	
TEST BUTTONS	The TEST BUTTONS will operate the gate (OPEN, STOP and CLOSE).	
STATUS LEDs	The STATUS LEDs are diagnostic codes for the operator. See Status LED Chart in the Troubleshooting section.	

ADDITIONAL FEATURES ACCESSORY FEATURES ON CONTROL BOARD

ACCESSORY FEATURES ON CONTROL BOARD

А	Open Input (& common) (3-Button Control Station, 4 terminals total)	Open command - opens a closed gate. Hard open (maintained switch overrides external safeties and resets alarm condition) If maintained, pauses Timer-to-Close at OPEN limit. Opens a closing gate and holds open an open gate (within line-of-sight).
B	Close Input (& common) (3-Button Control Station, 4 terminals total)	Close command - closes an open gate. Hard close (maintained switch overrides external safeties and resets alarm condition within line-of-sight)
C	Stop Input (& common) (3-Button Control Station, 4 terminals total)	Stop command - stops a moving gate. Hard stop (maintained switch overrides Open and Close commands and resets alarm condition) If maintained, pauses Timer-to-Close at OPEN limit. Overrides Open and Close commands (within line-of-sight).
D	Fire Dept Open Input (2 terminals)	Acts as hard open. Maintained input overrides (ignores) external safeties (photoelectric sensor and edge), pauses Timer-to-Close momentary input logic as single button control and safeties remain active, re-enables Timer-to-Close.
E	Exit Loop Input (2 terminals)	Open command - opens a closed gate. Soft open (maintained switch does not override external safeties and does not reset alarm condition) If maintained, pauses Timer-to-Close at OPEN limit. Opens a closing gate and holds open an open gate.
F	Shadow Loop Input (2 terminals)	Loop detector connection when loop is positioned under gate. - Holds open gate at open limit - Disregarded at CLOSE limit and during gate motion - Pauses Timer-to-Close at OPEN limit
G	CLOSE EYES/Interrupt Loop Input (2 terminals)	CLOSE EYES/Interrupt Loop detector connection when loop is along the side of the gate. - Holds open gate at open limit - Stops and reverses a closing gate to open limit - Pauses Timer-to-Close at OPEN limit Close Direction Photoelectric Sensors, IR, or Infra-red detector wired to CLOSE EYES Input, disregarded during gate
		opening. Pulsed Photoelectric Sensors = monitored device putting out a pulse train when unblocked. Photoelectric Sensors, IR, Infra-red detector, contact opens fully with obstruction.
Η	Close Edge (2 terminals)	Close Direction Edge Sensor to Close Safety Input, disregarded during gate opening
	Open Eyes/Edge (2 terminals)	Open Direction Photoelectric Sensors, IR, Infra-red detector wired or Edge Sensor to Close Entrapments Input, disregarded during gate closing,
		Pulsed Photoelectric Sensors = monitored device putting out a pulse train when unblocked. Photoelectric Sensors, IR, Infra-red detector, edge sensor = normally open contact, contact reverses for 2 seconds with obstruction.
J	Comm Link (2 terminals)	Commercial Link (two wires) - connects two operators together (primary-secondary wired connection)
Κ	Lock Outputs: Maglock (2 terminals, N.C. and COM)	Relay contact output, Normally - closed (N.C.) output for maglocks Relay activates prior to motor activation and during motor run. Relay is off when motor is off.
L	Solenoid Lock & Common (2 terminals, N.O. and COM)	Normally - open (N.O.) output for solenoid locks Relay activates prior to motor activation and during motor run. Relay is off when motor is off.
М	Accessory Power Out Switched, (2 terminals)	24 Vdc voltage out to power accessories, will turn off when gate is not in motion to save battery power Always on if Expansion Board is connected.
Ν	Accessory Power Out Un-switched, (2 terminals)	24 Vdc voltage out to power accessories, always ON

ADDITIONAL FEATURES

EXPANSION BOARD OVERVIEW

CAUTION

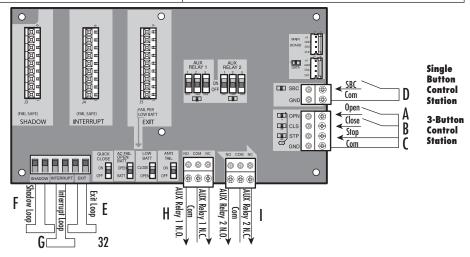

To AVOID damaging the circuit heard relays or accessories DO NOT connect more than 42 Vdc (32 Vac) to the AUX relay contact terminal blocks

IO AVUID damaging the circuit board, relays or accessories, DU NUT connect more than 42 vac (32 vac) to the AUX relay contact terminal blocks.			
QUICK CLOSE Switch	OFF: No change to the gate's normal operation. ON: When CLOSE EYES/Interrupt loop is deactivated it causes an opening or a stopped gate to close (ignores the Timer-to-Close).		
AC FAIL OPEN/BATT Switch	OPEN: Loss of AC power will cause gate to immediately OPEN and remain OPEN until AC power is restored (enabling the Timer-to-Close). BATT: With loss of AC power, gate will remain in present position and operator is powered from batteries.		
LOW BATT/EXIT LOOP FAIL Switch	 When AC power is OFF and battery voltage is low the gate will latch at a limit until AC power is restored or batteries voltage increases. Option select switch set to OPEN forces gate to latch at the OPEN limit if it is at the OPEN limit or on next open command until AC power is restored or battery voltage increases. Option select switch set to CLOSE forces gate to latch at CLOSE limit if at CLOSE limit or on next CLOSE command until AC power restored or battery voltage increases. Option select switch set to CLOSE forces gate to latch at CLOSE limit if at CLOSE limit or on next CLOSE command until AC power restored or battery voltage increases. Constant pressure on a hard command input overrides to open or close the gate. Low battery detect point = 22 V When set to OPEN, if the EXIT plug-in loop detector detects a fault, then the gate will open and remain open until fault is cleared. When set to CLOSE, then plug-in EXIT loop detector faults are ignored (EXIT loop is faulted and inoperative). 		
ANTI-TAIL OPEN/CLOSE SELECTION switch	OFF: When CLOSE EYES/Interrupt loop is activated it causes a closing gate to stop and reverse. ON: When CLOSE EYES/Interrupt loop is activated it causes a closing gate to pause. Once the vehicle is clear the gate will continue to close.		
ALLY RELAY switches	Set the AILY RELAY switches as needed to obtain the desired function:		

AUX RELAY switches			Set the AUX RELAY switches as needed to obtain the desired function:			
AUX RELAY SETTING					AUX RELAY 2	
	1	2	3			
Off (no feature selected)	OFF	OFF	OFF	Relay always off. Use this Aux Relay setting to conserve battery power.	Relay always off. Use this Aux Relay setting to conserve battery power.	
Open Limit Switch	OFF	OFF	ON	Energizes at open limit. Use with SAMS (Sequenced Access Management System, jointly with barrier gate)	Energizes when at open limit. Use with SAMS (Sequenced Access Management System, jointly with barrier gate)	
Close Limit Switch	OFF	ON	OFF	Energizes when not at close limit. Connect "Gate Close/Secure" indicator (e.g. light).	Energizes when not at close limit. Connect "Gate Not Closed/Secure" indicator (e.g. light).	
Gate Motion	OFF	ON	ON	Energizes when motor is on (gate in motion). Connect "Gate In Motion" Energizes when motor is on (gate in motion). Connect "Gate indicator (e.g. warning light or sounder).		
Pre-Motion Delay	ON	OFF	OFF	Energizes 3 seconds before gate motion and remains energized during gate Not used. motion. Connect "Gate In Motion" indicator (e.g. warning light or sounder).		
Power	ON	ON	OFF	Energizes when AC power or solar power is present. There is approximately a 10-12 second delay before relay cutoff, after AC shutdown. Energizes when on battery power. There is approximately a second delay before relay cutoff, after AC shutdown.		
Tamper	ON	OFF	ON	Energizes if gate is manually tampered with by being pushed off of close limit. Connect alert (e.g. light or sounder). Energizes if gate is manually tampered with by being pushed limit. Connect alert (e.g. light or sounder).		
Cycle Quantity Feedback*	ON	ON	ON	The OPEN, CLOSE, and STOP LEDs will blink out the cycle count See below.	Not used.	

CYCLE COUNT

* First, note the current Aux Relay switch positions. To determine the actual cycles that the gate operator has run (in thousands), set all three Aux Relay switches to the ON setting for Aux Relay 1. The Expansion Board's OPEN, CLOSE, and STOP LEDs will blink out the cycle count, with OPEN LED blinking 1000's, CLOSE LED blink 10,000's, STOP LED blinking 100,000's, and simultaneously all three LED's blink 1,000,000's (e.g. Open blinks 3 times, Close blinks 6 times, and Stop blinks once. Cycle count is 163,000.). Cycle count displayed is between 1,000 and 9,999,000 cycles. After servicing, set Aux Relay switches back to their appropriate positions. Cycle count cannot be reset or changed. If under 1,000 cycles the Open, Close, and Stop LEDs will turn on for 10 seconds, then turn off.

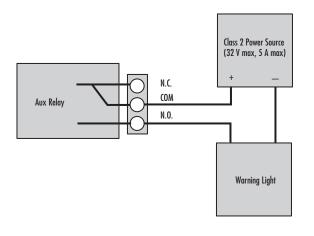

ADDITIONAL FEATURES

ACCESSORY FEATURES ON EXPANSION BOARD

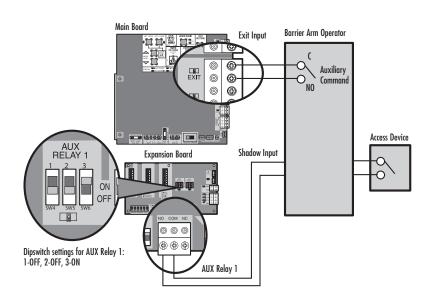

ACCESSORY FEATURES ON EXPANSION BOARD

A	Open Input (& common) (3-Button Control Station, 4 terminals total)	Open command - opens a closed gate. Soft close (maintained switch does not override external safeties and does not reset alarm condition) If maintained, pauses Timer-to-Close at OPEN limit. Opens a closing gate and holds open an open gate.
E	Close Input (& common) (3-Button Control Station, 4 terminals total)	Close command - closes an open gate. Soft close (maintained switch does not override external safeties and does not reset alarm condition)
(Stop Input (& common) (3-PB station, 4 terminals total)	Stop command - stops a moving gate. Hard stop (maintained switch overrides Open and Close commands and resets alarm condition) If maintained, pauses Timer-to-Close at OPEN limit. Overrides an Open or Close command.
[Single Button Control, SBC (2 terminals)	Gate command sequence - Open, Stop, Close, Stop, Soft open (maintained switch does not override external safeties and does not reset alarm condition)
E	Exit Loop Input (2 terminals)	Loop wire connection for plug-in loop detector when loop is inside secured area near gate. Open command - opens a closed gate. Soft open (maintained switch does not override external safeties and does not reset alarm condition) If maintained, pauses Timer-to-Close at OPEN limit. Opens a closing gate and holds open an open gate.
F	Shadow Loop Input (2 terminals)	Loop wire connection for plug-in loop detector when loop is along side gate. - Holds open gate at open - Disregarded at Close limit and during gate motion - Pauses Timer-to-Close at Open Limit
(Interrupt Loop Input (2 terminals)	Loop wire connection for plug-in loop detector when loop is positioned under gate. - Holds open gate at open - Stops and reverses a closing gate - Pauses Timer-to-Close at Open Limit
ŀ	AUX Relay #1	Normally - open and normally - closed relay contacts to control external devices, Function of relay contact activation determined by AUX Relay #1 option switch settings. (For connection of Class 2, low voltage (<32 V), DC or AC, max 5 Amps, power sources only)
	AUX Relay #2	Normally-open and normally-closed relay contacts to control external devices, Function of relay contact activation determined by AUX Relay #2 option switch settings. (For connection of Class 2, low voltage (<32 V), DC or AC, max 5 Amps, power sources only)

AUX RELAY WIRING EXAMPLE

SAMS WIRING WITH RELAYS NOT ENERGIZED

ADDITIONAL FEATURES LIMIT SETUP WITH A REMOTE CONTROL

To set the limits using a remote control, first you will need a 3-button remote control that has been programmed for OPEN, CLOSE, and STOP. Refer to the Programming section.

INITIAL LIMITS AND FORCE ADJUSTMENT

For dual gate applications the limits will have to be set for each operator. The gate MUST be attached to the operator before setting the limits and force.

Ensure the gate is closed.

- Press the SET OPEN and SET CLOSE buttons simultaneously to enter limit setting mode.
- Press and hold the OPEN or CLOSE button on the remote control until the gate reaches the desired open position. The gate can be jogged back and forth using the OPEN and CLOSE buttons on the remote control.
- **3** Once the gate is in the desired open position, press and release the STOP button on the remote control.
- 4 Press and release the OPEN button on the remote control again to set the open limit.
- 5 Press and hold the CLOSE or OPEN button on the remote control until the gate reaches the desired close position. The gate can be jogged back and forth using the OPEN and CLOSE buttons on the remote control.
- 6 Once the gate is in the desired close position, press and release the STOP button on the remote control.
- 7 Press and release the CLOSE button on the remote control again to set the close limit.

8 Cycle the gate open and close. This automatically sets the force. When limits are set properly the operator will automatically exit limit setting mode.

ADJUST THE LIMITS

If the limits have already been set the operator will exit the limit setting mode after resetting each limit.

Set the Close Limit Only

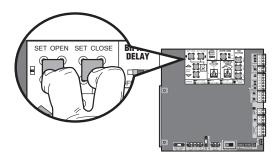

- Press the SET OPEN and SET CLOSE buttons simultaneously to enter limit setting mode.
- Press and hold the CLOSE button on the remote control until the gate reaches the desired close position. The gate can be jogged back and forth using the OPEN and CLOSE buttons on the remote control.
- **3** Once the gate is in the desired close position, press and release the STOP button on the remote control.
- 4 Press and release the CLOSE button on the remote control again to set the close limit.

When the close limit is set properly the operator will automatically exit limit setting mode.

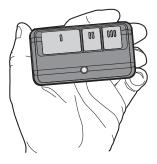

LIMIT SETUP WITH A REMOTE CONTROL

A WARNING

To reduce the risk of injury keep clear of moving arm while setting limits.

3-Button Remote Control programmed for OPEN, CLOSE, and STOP

- Set the Open Limit Only
- Press the SET OPEN and SET CLOSE buttons simultaneously to enter limit setting mode.
- Press and hold the OPEN button on the remote control until the gate reaches the desired open position. The gate can be jogged back and forth using the OPEN and CLOSE buttons on the remote control.
- **3** Once the gate is in the desired open position, press and release the STOP button on the remote control.
- 4 Press and release the OPEN button on the remote control again to set the open limit.

When the open limit is set properly the operator will automatically exit limit setting mode.

MAINTENANCE

MAINTENANCE CHART

Disconnect all power (AC, solar, battery) to the operator before servicing. The operator's AC Power switch ONLY turns off AC power to the control board and DOES NOT turn off battery power. ALWAYS disconnect the batteries to service the operator.

DESCRIPTION	TASK	CHECK	AT LEAST ONCE	EVERY
		MONTH	6 MONTHS	3 YEARS
Entrapment Protection Devices	Check and test for proper operation	Х		
Warning Signs	Make sure they are present	Х		
Manual Disconnect	Check and test for proper operation		Х	
Sprockets and Chains	Check for excessive slack and lubricate		Х	
Gate	Inspect for wear or damage	Х		
Accessories	Check all for proper operation		Х	
Electrical	Inspect all wire connections		Х	
Chassis Mounting Bolts	Check for tightness		Х	
Operator	Inspect for wear or damage		Х	
Batteries	Replace			Х

NOTES:

- Severe or high cycle usage will require more frequent maintenance checks.
- It is suggested that while at the site voltage readings be taken at the operator. Using a digital voltmeter, verify that the incoming voltage to the operator it is within ten percent of the operator's rating.

BATTERIES

Batteries will degrade over time depending on temperature and usage. For best performance, the batteries should be replaced every 3 years. Use only LiftMaster part 29-NP712 for replacement batteries. The operator comes with two 7AH batteries. Two 33AH (A12330SGLPK) with additional battery tray (K10-36183) may be used in place of the 7AH batteries.

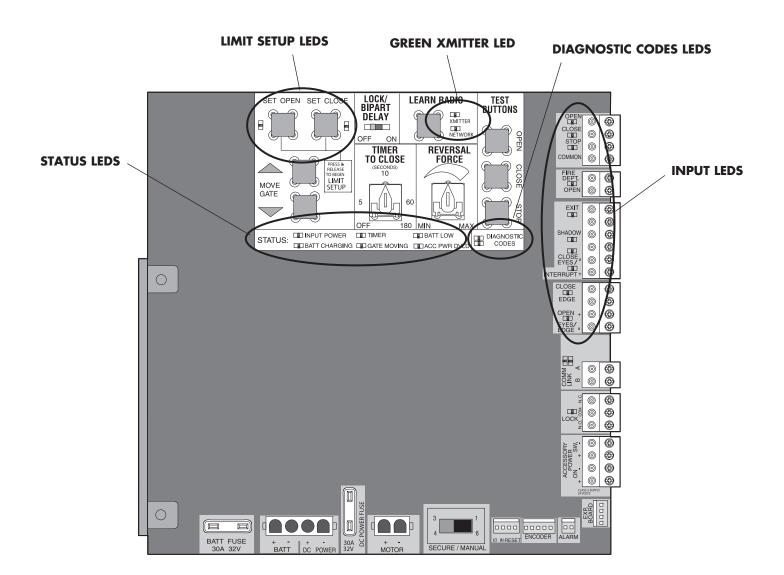

The batteries contain lead and need to be disposed of properly. Batteries do not perform well in extremely cold temperatures.

NOTE: If your application includes a heater, two 33AH will not fit into the operator enclosure.

The operator alarm will beep 3 times with a command if the battery is low.

CONTROL BOARD LEDS

The control board is equipped with many LEDs that have a variety of functions. The control board LEDs indicate the status of the operator, assist with programming, and diagnose potential problems with the operator.

LIMIT SETUP LEDS			
SET OPEN LED	SET CLOSE LED	OPERATOR MODE	EXPLANATION
BLINKING	BLINKING	NORMAL MODE	Limits are not set.
OFF	OFF	NORMAL MODE	Limits are set.
BLINKING	BLINKING	LIMIT SETTING MODE	Limits are not set.
BLINKING	ON	LIMIT SETTING MODE	Open limit is not set.
ON	BLINKING	LIMIT SETTING MODE	Close limit is not set.
ON	ON	LIMIT SETTING MODE	Limits are set.

GREEN XMITTER LED		
XMITTER LED	EXPLANATION	
OFF	No remote control activity, normal operation.	
ON	Programming mode active.	
FAST	Recognized remote control signal.	
FASTER	Unrecognized remote control signal.	
FASTEST	Remote controls are being erased.	

CONTROL BOARD LEDS

	YELLOW DIA	GNOSTIC LED	
# BLINKS	MEANING	CORRECTION	
1 BLINK	Low Power Mode	(not an error)	
2 BLINKS	ID resistor failure	Check ID resistor wiring, clear limit settings and reset limits	
3 BLINKS	Exceeded Maximum Run Timer	Check gate travel, if necessary adjust force setting	
5 BLINKS	RPM (obstruction)	Check for obstruction, if necessary adjust force setting	
6 BLINKS	Current (obstruction)	Check for obstruction, if necessary adjust force setting	
7 BLINKS	Position failure	Check gate travel, clear limit settings and reset limits	
12 BLINKS	Loop Error	One of the loops is in error. Refer to the loop detector to determine the error.	

)		RED DIAGNOSTIC LED			
N	# BLINKS	MEANING	CORRECTION		
	2 BLINKS	Current Sense	Motor control circuit fault, replace control board		
r wiring, clear limit et limits	3 BLINKS	FET Failure	Motor control circuit fault, replace control board		
el, if necessary adjust	4 BLINKS	RAM Failure	Memory failure, replace control board		
iction, if necessary ing	5 BLINKS	Flash Memory Failure	Memory failure, replace control board		
iction, if necessary	6 BLINKS	EEPROM Failure	Memory failure, replace control board		
ing el, clear limit settings	7 BLINKS	Watchdog Failure	Controller failure, replace control board		
	8 BLINKS	Brownout	Check power harness or line voltage		
s in error. Refer to the etermine the error.	9 BLINKS	Fail	Control Board failure		
	10-14 BLINKS	Software Failure	Cycle power to the control board. If continues replace control board.		

STATUS LEDS			
INPUT POWER	OFF	OFF state	
	ON	AC charger or Solar power available	
BATT	OFF	Not charging	
CHARGING	ON	Trickle charge	
	FAST BLINK	High current charge	
	FASTER BLINK	Over voltage error	
TIMER	OFF	The timer is disabled	
	ON	The timer is enabled	
	MEDIUM BLINK	The timer is running	
	FAST BLINK	The timer is paused	
	FASTER BLINK	The timer is cancelled	
GATE MOVING	OFF	The gate is stopped	
	ON	The gate is opening or closing	
	FASTEST BLINK	The operator is in E2	
BATT LOW	OFF	No battery error	
	ON	Battery low error	
	MEDIUM BLINK	Battery critically low error	
	FAST BLINK	Battery disconnected error	
	FASTEST BLINK	Charging, extreme temperature, or over voltage error	
ACC PWR OVLD	OFF	OFF state	
	ON	Accessory overload protector opened	

INPUT LEDS			
OPEN INPUT	OFF	Input inactive	
	ON	Input active	
	BLINK	Input active on other operator	
CLOSE INPUT	OFF	Input inactive	
	ON	Input active	
	BLINK	Input active on other operator	
STOP INPUT	OFF	Input inactive	
	ON	Input active	
	BLINK	Input active on other operator	
FIRE DEPT	OFF	Input inactive	
INPUT	ON	Input active	
	BLINK	Input active on other operator	
OPEN SAFETY	OFF	Input inactive	
INPUT	ON	Input active	
	BLINK	Input active on other operator	
CLOSE SAFETY	OFF	Input inactive	
INPUT	ON	Input active	
	BLINK	Input active on other operator	

FAULT	POSSIBLE CAUSES	CORRECTIONS
Operator does not run and diagnostic LED not on.	 a) No power to control board b) Open fuse c) If on battery power only, low or dead batteries d) Defective control board 	a) Check AC and battery power b) Check fuses c) Charge batteries by AC or solar power or replace batteries d) Replace defective control board
Control board powers up, but motor does not run.	 a) Check DIAGNOSTIC LEDs b) Reset button is stuck c) Stop button active d) If on battery power only, low or dead batteries e) Open or Close input active f) Entrapment Protection Device active g) Vehicle loop detector or probe active h) Defective control board 	 a) Use Diagnostic code to identify issue b) Check Reset button c) Check Stop button is not "stuck on" d) Charges batteries by AC or solar power or replace batteries e) Check all Open and Close inputs for a "stuck on" input f) Check all Entrapment Protection Device inputs for a "stuck on" sensor g) Check all vehicle detector inputs for a "stuck on" detector h) Replace defective control board
Relay clicks with command, but motor does not turn on.	a) Arm jammed or not connectedb) Defective motor or motor wiresc) Defective control board	 a) Disconnect the arm from the operator and ensure arm moves freely b) Inspect motor and motor wires for open wire, shorted wires, damage, etc. Else, replace motor. c) Replace defective control board.
Arm moves, but cannot set correct limits.	a) Arm does not extend or retract enough during travelb) Arm is interfering with mounting bracketc) Gate is too difficult to move	 a) Disconnect the arm from the operator and ensure arm moves freely b) Examine the hinge point where the arm mounts to the gate post. Make sure that the arm housing does not hit or interfere with the gate post or mounting bracket. Correct as necessary. c) Disconnect arm from gate and move gate manually. Gate must move easily and freely through its entire range, limit-to-limit. Repair gate as needed.
Gate does not fully open or fully close when setting limits.	a) Arm does not extend or retract enough during travelb) Arm is interfering with mounting bracketc) Gate is too difficult to move	 a) Disconnect the arm from the operator and ensure arm moves freely b) Examine the hinge point where the arm mounts to the gate post. Make sure that the arm housing does not hit or interfere with the gate post or mounting bracket. Correct as necessary. c) Disconnect arm from gate and move gate manually. Gate must move easily and freely through its entire range, limit-to-limit. Repair gate as needed.
Operator does not respond to a wired control/command (example: Open, Close, SBC, etc.)	 a) Check DIAGNOSTIC LEDs b) Check Open and Close command input LEDs c) Stop button is active d) Reset button is stuck e) If on battery power only, low or dead batteries f) Entrapment Protection Device active g) Vehicle loop detector or vehicle probe active h) Defective control board 	 a) Use Diagnostic code to identify issue b) Check all Open and Close inputs for a "stuck on" input c) Check Stop button is not "stuck on" d) Check Reset button e) Charges batteries by AC or solar power or replace batteries f) Check all Entrapment Protection Device inputs for a "stuck on" sensor g) Check all vehicle detector inputs for a "stuck on" detector h) Replace defective control board
Operator does not respond to a wireless control or transmitter	 a) Check DIAGNOSTIC LEDs b) Check XMITTER LED when wireless control is active c) Stop button is active d) Reset button is stuck e) Poor radio reception f) Defective control board 	 a) Use Diagnostic code to identify issue b) Activate wireless control and check XMITTER LED is on. Re-learn wireless control/ transmitter to control board. Replace wireless control as needed. c) Check Stop button is not "stuck on" d) Check Reset button e) Check if similar wired control operates correctly. Check if wireless controls works properly when within a few feet of operator. Check operator's antenna and antenna wire. Check other wireless control board f) Replace defective control board

FAULT	POSSIBLE CAUSES	CORRECTIONS
Gate stops during travel and reverses immediately.	 a) Check DIAGNOSTIC LEDs b) Inherent force obstruction detection c) External Entrapment Protection Device activation d) Control (Open, Close) becoming active e) Vehicle loop detector active f) Low battery voltage 	 a) Use Diagnostic code to identify issue b) Check for obstruction in gate's path or travel. Disconnect arm from gate and move gate manually. Gate must move easily and freely through its entire range, limit-to-limit. Remove obstruction or repair gate as needed. c) Check all Entrapment Protection Device inputs for an active sensor d) Check all Open and Close inputs for an active input e) Check all vehicle detector inputs for an active detector f) Battery voltage must be 22.0 Vdc or higher. Charge batteries by AC or solar power or replace batteries
Gate opens, but will not close.	 a) Check DIAGNOSTIC LEDs b) Open control active c) Close Entrapment Protection Device active d) Vehicle loop detector active e) Loss of AC power with AC FAIL set to OPEN f) Low battery with LOW BATT set to OPEN g) Fire Dept input active 	 a) Use Diagnostic code to identify issue b) Check all Open inputs for an active input c) Check all Entrapment Protection Device inputs for an active sensor d) Check all vehicle detector inputs for an active detector e) Check AC power and AC Fail option setting f) Battery voltage must be 22.0 Vdc or higher. Charge batteries by AC or solar power or replace batteries g) Check Fire Dept input
Gate closes, but will not open.	 a) Check DIAGNOSTIC LEDs b) Open Entrapment Protection Device active c) Vehicle loop detector active d) Low battery with LOW BATT option set to CLOSE 	 a) Use Diagnostic code to identify issue b) Check all Entrapment Protection Device inputs for an active sensor c) Check all vehicle detector inputs for an active detector d) Check if AC power is available. If no AC power, then running on batteries and battery voltage must be 22.0 Vdc or higher. Charge batteries by AC or solar power or replace batteries
Gate does not close from Timer-to-Close.	 a) Timer-to-Close not set b) Open control active c) Close Entrapment Protection Device active d) Vehicle loop detector active e) Loss of AC power with AC FAIL set to OPEN f) Low battery with LOW BATT option set to OPEN g) Fire Dept input active 	 a) Check Timer-to-Close (TTC) setting b) Check all Open inputs for an active input c) Check all Entrapment Protection Device inputs for an active sensor d) Check all vehicle detector inputs for an active detector e) Check AC power and AC Fail option setting f) Check if AC power is available. If no AC power, then running on batteries and battery voltage must be 22.0 Vdc or higher. Charge batteries by AC or solar power or replace batteries. g) Check Fire Dept input
Vehicle Exit loop activation does not cause gate to open.	 a) Check DIAGNOSTIC LEDs b) Exit vehicle detector setup incorrectly c) Defective Exit loop detector or loop wire d) Low battery with LOW BATT option set to CLOSE 	 a) Use Diagnostic code to identify issue. b) Review Exit loop detector settings. Adjust settings as needed. c) Check Exit loop wire. Replace defective Exit loop detector. d) Check if AC power is available. If no AC power, then running on batteries and battery voltage must be 22.0 Vdc or higher. Charge batteries by AC or solar power or replace batteries.
CLOSE EYES/ Interrupt loop does not cause gate to stop and reverse.	a) Check DIAGNOSTIC LEDsb) Vehicle detector setup incorrectlyc) Defective vehicle loop detector or loop wire	a) Use Diagnostic code to identify issue. Check Anti-Tail gate switch.b) Review Interrupt loop detector settings. Adjust settings as neededc) Check Interrupt loop wire. Replace defective Interrupt loop detector
Vehicle Shadow loop does not keep gate at open limit.	a) Check DIAGNOSTIC LEDs b) Vehicle detector setup incorrectly c) Defective vehicle loop detector or loop wire	a) Use Diagnostic code to identify issueb) Review Shadow loop detector settings. Adjust settings as neededc) Check Shadow loop wire. Replace defective Shadow loop detector

FAULT	POSSIBLE CAUSES	CORRECTIONS
Obstruction in gates path does not cause gate to stop and reverse	a) Force setting too high	a) Adjust force setting. Retest that obstruction in gate's path causes gate to stop and reverse direction.
Photoelectric sensor does not stop or reverse gate.	a) Incorrect photoelectric sensor wiring b) Defective photoelectric sensor	 a) Check photoelectric sensor wiring. Retest that obstructing photoelectric sensor causes moving gate to stop, and may reverse direction. Check Anti-Tail gate switch. b) Replace defective photoelectric sensor. Retest that obstructing photoelectric sensor causes moving gate to stop, and may reverse direction.
Edge Sensor does not stop or reverse gate.	a) Incorrect edge sensor wiring b) Defective edge sensor	a) Check edge sensor wiring. Retest that activating edge sensor causes moving gate to stop and reverse direction.b) Replace defective edge sensor. Retest that activating edge sensor causes moving gate to stop and reverse direction.
Alarm sounds for 5 minutes or alarm sounds with a command.	a) Double entrapment occurred	a) Check for cause of entrapment (obstruction) detection and correct. Press the reset button to shut off alarm and reset the operator.
Alarm beeps three times with a command.	a) Low battery with loss of AC/solar power	 a) Check if AC power is available. If no AC power, then running on batteries and battery voltage must be 22.0 Vdc or higher. Charge batteries by AC or solar power or replace batteries
On dual-gate system, one gate is not commanding the other.	 a) Defective or incorrect Operator-to-Operator wiring b) Incorrect Operator-to-Operator wireless learning 	a) Check operator-to-operator wiring.b) Relearn the wireless network of one operator to the other operator.
On dual-gate system, incorrect gate opens first or closes first.	a) Incorrect Bipart switch setting	 a) Change setting of both operator's Bipart switch settings. One operator should have Bipart switch ON (operator that opens first) and the other operator should have Bipart switch OFF (operator that opens second)
Expansion board function not controlling gate.	 a) Defective main board to expansion board wiring b) Incorrect input wiring to expansion board c) Defective expansion board or defective main board 	a) Check main board to expansion board wiring. If required, replace wire cable.b) Check wiring to all inputs on expansion board.c) Replace defective expansion board or defective main board
Maglock not working correctly.	a) Maglock wired incorrectly	a) Check that Maglock is wired to N.O. and COM terminals. Check that Maglock has power (do not power maglock from control board accessory power terminals). If shorting lock's NO and COM wires does not activate Maglock, then replace Maglock or Maglock wiring
Solenoid lock not working correctly.	a) Solenoid wired incorrectly	a) Check that Solenoid is wired to N.C. and COM terminals. Check that Solenoid has power (do not power solenoid from control board accessory power terminals). If shorting lock's NC and COM wires does not activate Solenoid, then replace Solenoid lock or Solenoid wiring
Switched (SW) Accessory power remaining on.	a) Main control board is not going to low power mode.	a) Photoelectric sensor inputs may be active.
Accessories connected to Switch (SW) Accessory power not working correctly, turning off, or resetting.	a) Main control board is going to low power mode.	a) With expansion board disconnected and running on batteries (no AC power or solar power available), main board will go into low power mode. Move accessory power to Accy Power ON terminals (+, -). Connect expansion board to prevent low power mode.

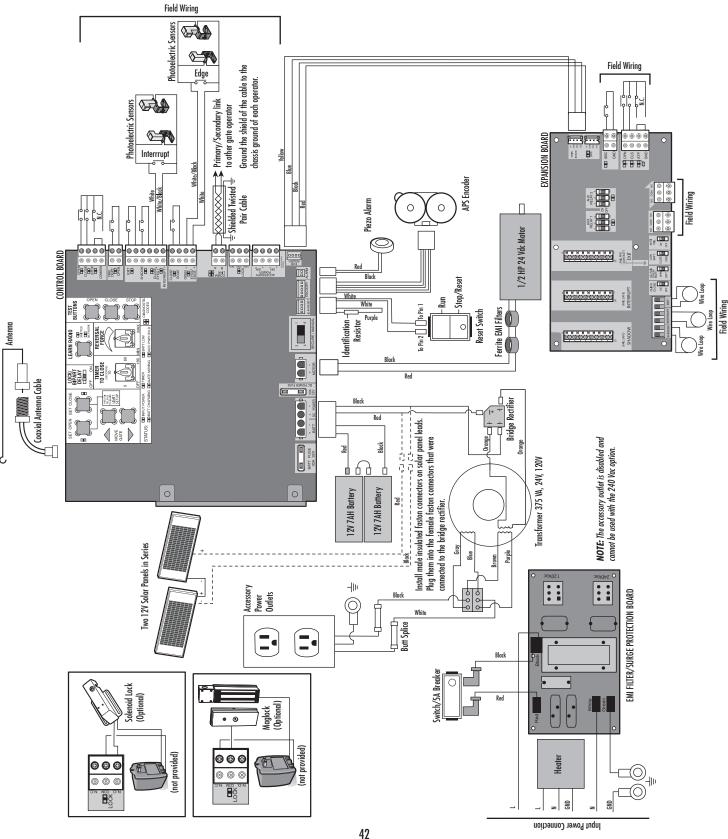

FAULT	POSSIBLE CAUSES	CORRECTIONS
Accessories connected to Accessory power not working correctly, turning off, or resetting.	a) Accessory power protector active b) Defective control board	 a) Disconnect all accessory powered devices and measure accessory power voltage (should be 23 – 30 Vdc). If voltage is correct, connect accessories one at a time, measuring accessory voltage after every new connection. b) Replace defective control board
Quick Close not working correctly.	 a) Quick Close setting incorrect b) CLOSE EYES/Interrupt loop detector or loop wire defective c) Defective Expansion board 	a) Check that Quick Close setting is ON b) Check operation of CLOSE EYES/Interrupt Loop detector c) Replace defective Expansion board
Anti-Tailgating not working correctly.	 a) Anti-Tail setting incorrect b) CLOSE EYES/Interrupt loop detector or loop wire defective c) Defective Expansion board 	a) Check that Anti-Tail setting is ON b) Check operation of CLOSE EYES/Interrupt Loop detector c) Replace defective Expansion board
AUX Relay not working correctly.	a) AUX Relay setting incorrect b) AUX Relay wiring incorrect c) Defective Expansion board	a) Check AUX Relay switches settingsb) Check that wiring is connected to either N.O. and COM or to N.C. and COM.c) Set AUX Relay to another setting and test. Replace defective expansion board.

WIRING DIAGRAMS

NON SOLAR

A WARNING

- To protect against fire and electrocution:
- DISCONNECT power and battery BEFORE installing or servicing operator.
- For continued protection against fire:
- Replace ONLY with fuse of same type and rating.

ACCESSORIES

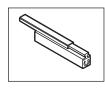

ENTRAPMENT PROTECTION DEVICES

PHOTOELECTRIC SENSORS (NON-CONTACT)

The photoelectric sensors are designed to detect an obstacle in the path of the electronic beam and stop the operator. Includes mounting brackets.

Models AOMRON E3K-R10K4-NR (retro-reflective), RETROAB 60-2728 (retro-reflective), CPS-UN4 (through beam)

SENSING EDGE (2-WIRE, NON-MONITORED, CONTACT)

Sensing edges can detect an obstacle upon contact and stop the operator.

Models G65MG0204, G65MG0205, G65MGR205, and G65MGS205

SENSING EDGE CHANNEL

Mounting channel for all MG020 type edges. Model G65ME120C5

REMOTE CONTROLS

Chamberlain offers a variety of LiftMaster remote controls to satisfy your application needs. Single-button to 4-button, visor or key chain. The following remote controls are compatible with operators manufactured by Chamberlain after 1993. Contact your authorized LiftMaster dealer for additional details and options.

3-BUTTON REMOTE CONTROL

The 3-button remote control can be programmed to control the operator. Includes visor clip.

3-BUTTON MINI-REMOTE CONTROL

The 3-button remote control can be programmed to control the operator. Includes key ring and fastening strip. Model 890MAX

KEYLESS ENTRY

Model 893MAX

Enables homeowner to operate gate operator from outside by entering a 4-digit code on a specially designed keypad. Model 877MAX

MISCELLANEOUS

POST-MOUNTING PLATE

For post-mounting model CSW24V commercial swing operator (also CSW200 commercial swing operator). Posts not included. Model MPEL

REMOTE ANTENNA EXTENSION KIT

The remote antenna extension kit allows the antenna to be remotely installed. Model 861M

WIRELESS ACCESS CONTROL RECEIVER

Access control receiver for up to 450 remote controls. Model STAR450-315

MISCELLANEOUS

HEATER

Keeps operator, gearbox and batteries at suitable temperature when outside temperature is below 0°F for extended periods of time.

Models GHTRKITRSW (for Swing operator, includes bracket for optimal heater location) and G6518CSW (Swing replacement heater only)

PLUG-IN LOOP DETECTOR Conveniently plugs into existing control board.

Model LOOPDETLM

LOOP DETECTOR

Low power loop detectors. Model LD7LP

VEHICLE SENSING PROBE

SOLAR PANEL KIT - 10 WATT

Model CP3

This kit is to replace or add a solar panel to the operator application. Up to three solar panels can be connected to the operator.

car as it approaches and will then open the gate.

Model SOLPNL10W12V (requires 2 minimum)

BATTERY FOR GATE ACCESS SYSTEMS

Gate access system batteries replace or upgrade the gate operator batteries.

The vehicle sensing probe is buried in the ground and can detect a

Model 29-NP712 (standard 7 AMP-Hour Battery or two 7 AMP-Hour battery service kit K74-30762, 12 Vdc, to replace original batteries provided with operator, reuse existing harnesses)

Model A12330SGLPK (upgrade 33 AMP-Hour Battery, 12 Vdc, includes 33AH harness. Ideal for solar applications and extended battery backup. Two required.)

Two identical 12 Vdc batteries are required for each gate operator. Do not mix 7AH and 33AH batteries within a gate operator.

Model K10-36183 (battery tray for use with 33AH batteries)

SOLENOID GATE LOCK

The automatic gate lock is a solenoid-driven lock that automatically unlocks when the gate is open and locks when the gate is closed. Can be mounted onto a gate or post. Can be released in case of emergency.

Models GC824 (115 Vac) and GC824-12 (12/24 Vac/dc)

MAGNETIC GATE LOCK

Outdoor magnetic lock, transformer, junction box, mounting plate and hardware. Not for use with Solar Applications. Must be powered separately. Model MG1300

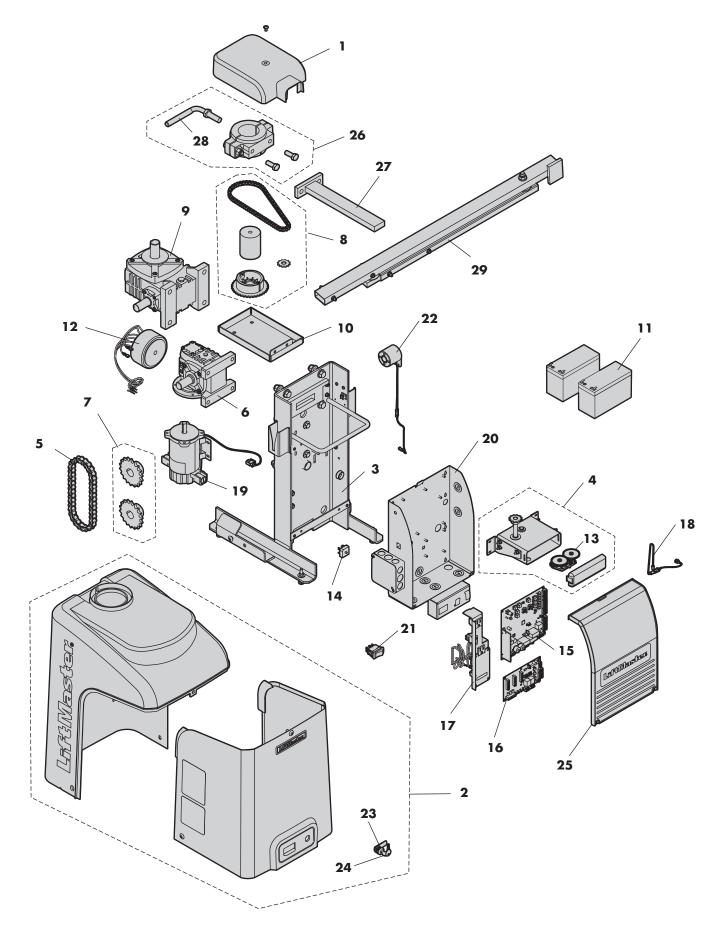

REPAIR PARTS

INDIVIDUAL PARTS

ITEM	PART NUMBER	DESCRIPTION	NOT SHOWN	
1	K13-36117	Cludge Cover	K94-36540	Wiring Harness with ID resistor assembly

WARRANTY

7 YEAR RESIDENTIAL / 5 YEAR COMMERCIAL CSW24V™ AND CSW24VH™ LIMITED WARRANTY

The Chamberlain Group, Inc. ("Seller") warrants to the first purchaser of this product, for the structure in which this product is originally installed, that it is free from defect in materials and/or workmanship for a period of 7 year residential/ 5 year commercial from the date of purchase [and that the CSW24VTM and CSW24VHTM are free from defect in materials and/or workmanship for a period of 7 year residential/ 5 year commercial from the date of purchase]. The proper operation of this product is dependent on your compliance with the instructions regarding installation, operation, maintenance and testing. Failure to comply strictly with those instructions will void this limited warranty in its entirety.

If, during the limited warranty period, this product appears to contain a defect covered by this limited warranty, call **1-800-528-2806**, toll free, before dismantling this product. Then send this product, pre-paid and insured, to our service center for warranty repair. You will be advised of shipping instructions when you call. Please include a brief description of the problem and a dated proof-of-purchase receipt with any product returned for warranty repair. Products returned to Seller for warranty repair, which upon receipt by Seller are confirmed to be defective and covered by this limited warranty, will be repaired or replaced (at Seller's sole option) at no cost to you and returned pre-paid. Defective parts will be repaired or replaced with new or factory-rebuilt parts at Seller's sole option.

ALL IMPLIED WARRANTIES FOR THE PRODUCT, INCLUDING BUT NOT LIMITED TO ANY IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE, ARE LIMITED IN DURATION TO THE 7 YEAR RESIDENTIAL/ 5 YEAR COMMERCIAL LIMITED WARRANTY PERIOD SET FORTH ABOVE [EXCEPT THE IMPLIED WARRANTIES WITH RESPECT TO THE CSW24VTM AND CSW24VHTM, WHICH ARE LIMITED IN DURATION TO THE 7 YEAR RESIDENTIAL/ 5 YEAR COMMERCIAL LIMITED WARRANTY PERIOD FOR THE CSW24VTM AND CSW24VHTM], AND NO IMPLIED WARRANTIES WILL EXIST OR APPLY AFTER SUCH PERIOD. Some states do not allow limitations on how long an implied warranty lasts, so the above limitation may not apply to you. THIS LIMITED WARRANTY DOES NOT COVER NON-DEFECT DAMAGE, DAMAGE CAUSED BY IMPROPER INSTALLATION, OPERATION OR CARE (INCLUDING, BUT NOT LIMITED TO ABUSE, MISUSE, FAILURE TO PROVIDE REASONABLE AND NECESSARY MAINTENANCE, UNAUTHORIZED REPAIRS OR ANY ALTERATIONS TO THIS PRODUCT), LABOR CHARGES FOR REINSTALLING A REPAIRED OR REPLACED UNIT, OR REPLACEMENT OF BATTERIES.

THIS LIMITED WARRANTY DOES NOT COVER ANY PROBLEMS WITH, OR RELATING TO, THE GATE OR GATE HARDWARE, INCLUDING BUT NOT LIMITED TO THE GATE SPRINGS, GATE ROLLERS, GATE ALIGNMENT OR HINGES. THIS LIMITED WARRANTY ALSO DOES NOT COVER ANY PROBLEMS CAUSED BY INTERFERENCE. ANY SERVICE CALL THAT DETERMINES THE PROBLEM HAS BEEN CAUSED BY ANY OF THESE ITEMS COULD RESULT IN A FEE TO YOU.

UNDER NO CIRCUMSTANCES SHALL SELLER BE LIABLE FOR CONSEQUENTIAL, INCIDENTAL OR SPECIAL DAMAGES ARISING IN CONNECTION WITH USE, OR INABILITY TO USE, THIS PRODUCT. IN NO EVENT SHALL SELLER'S LIABILITY FOR BREACH OF WARRANTY, BREACH OF CONTRACT, NEGLIGENCE OR STRICT LIABILITY EXCEED THE COST OF THE PRODUCT COVERED HEREBY. NO PERSON IS AUTHORIZED TO ASSUME FOR US ANY OTHER LIABILITY IN CONNECTION WITH THE SALE OF THIS PRODUCT.

Some states do not allow the exclusion or limitation of consequential, incidental or special damages, so the above limitation or exclusion may not apply to you. This limited warranty gives you specific legal rights, and you may also have other rights which vary from state to state.
